The audit in one paragraph

A plain-English read of where you stand and what to do first. Two minutes to read; the rest of the report is the proof and the playbook.

Your site scores 58 out of 100 overall and falls into the needs-work band. The single worst score is off-page at 42 out of 100, driven by an unclaimed Google Business Profile, missing listings on Bing Places, Apple Maps, and Yelp UK, and a Google review average of 3.4 stars against a Leeds category median of 4.7. Search engines and AI answer engines cannot pin your brand to a Leeds location because the practice has no LocalBusiness schema and no Knowledge Panel. The first move is to claim the Google Business Profile, add DentistLocalBusiness JSON-LD to every service page, and start an automated review-request text message at every patient discharge. Executing that alone recovers roughly 20 to 25 points of the off-page score inside 30 days and unlocks the local pack for the routine-checkup and emergency-dentist queries you already earn traffic on.

A strategy that fits your business and your local market

The current strategy, the problems with it, and a recommended strategy built around your competition in this audit's market. The three concrete moves at the end are the highest-leverage starting points.

Where the practice sits today

Northgate Dental Care runs a general dental practice from a single Leeds address serving the LS7 postcode. The website is a five-year-old brochure: eight service pages, one blog updated inconsistently, and a contact page. There is no defined SEO strategy on record. Traffic comes almost entirely from branded searches for "northgate dental" and a small tail of "emergency dentist leeds" queries. Nothing is being invested in earning non-branded local search visibility.

The problem with the current approach

The Leeds dental market is not open. Three named competitors already own the category SERPs and the local pack for the queries a growing practice needs to win.

- Bupa Dental Leeds owns the top of every search result because of national brand authority and a strong Knowledge Panel entity.
- Leeds City Dental holds the local pack across 8 of 10 tracked service queries in LS1 through LS7 through a mature Google Business Profile, 500 plus Google reviews at 4.8 stars, and 2 blog posts per month cross-linked from the matching service pages.
- The Dental Studio Leeds ranks for long-tail service queries because every service page runs 900 to 1,400 words, uses a comparison table, and cites its clinicians by name.

Northgate Dental cannot outspend Bupa on brand and cannot copy Leeds City Dental's ten-year reviews head-start. Nor should it try. What it can do is close the two structural gaps competitors leave open: local-market signal density and content specificity per treatment.

Recommended strategy

Pursue a signal-density strategy focused on three areas that compound over 90 days and do not require a rebuild.

Move 1 - Own the local ranking signals every competitor already has claimed. Claim the Google Business Profile, complete every field, add DentistLocalBusiness schema on every service page, and start an automated post-treatment review-request text message. Target

moving from 3.4 stars to 4.3 stars in 90 days by adding review velocity, not by suppressing negatives.

Move 2 - Rewrite the three highest-margin service pages to the depth competitors already publish. Implants, Invisalign, and Whitening should each carry 800 to 1,200 words with a treatment-steps section, a comparison table, a bylined clinician author, and a common-questions block. Model the structure on the Leeds City Dental service pages that already outrank you.

Move 3 - Publish two evidence-cited blog posts a month tied by internal links to the matching service pages. Every post carries a GDC-numbered author, a reviewer credit, and 3 outbound links to peer-reviewed sources. This is the only durable answer to the E-E-A-T gap you carry today and the only content shape the AI Overview picks up.

Each move is scoped to a 30-day sprint and each one produces a measurable score lift the next audit will detect. The 90-day roadmap in the sprint plan carries the exact deliverables.

STRATEGY

Strategy issues in your site (3)

0 critical

1 minor

42 / 100

2 MAJOR ISSUES

ISSUE - 1 PAGE

MAJOR

STRATEGY

Brand mentions absent from category SERP

0 unlinked brand mentions found in the top 20 category-SERP pages for 'dentist leads'. For example: (home) has this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you visibility in the category SERP where customers search before they pick a practice.

HOW WE FIX IT

Pitch three quotes to Yorkshire Post and one to the Leeds Live health section this quarter. Target 4 unlinked brand mentions per month.

Effort: Medium (1 to 2 weeks)

Owner: Owner + SEO lead

ISSUE - 1 PAGE

MAJOR

STRATEGY

No Knowledge Graph entity for your brand

No Knowledge Panel appears for 'northgate dental care' in Google. Wikidata has no entity. For example: (home) has this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you visibility in the category SERP where customers search before they pick a practice.

HOW WE FIX IT

Build the Knowledge Panel by claiming the GBP, adding Organization schema, and cross-linking sameAs profiles on Wikidata, Crunchbase, and LinkedIn.

Effort: Medium (1 to 2 weeks)

Owner: Owner + SEO lead

1 MINOR CLEANUP ITEM

ISSUE	AFFECTS	FIX
Social profile activity signals	1 page	Post twice weekly on Instagram with owner-produced practice photography, tagged 'dentistleads'.

What is working in Strategy

- Domain age over 5 years - stable trust

CONTENT

Content issues in your site (3)

1 critical

2 major

0 minor

51 / 100

ISSUE - 9 PAGES

CRITICAL

CONTENT

Trust signals missing on 9 pages

No author byline, no GDC number, no reviewer credit found in the article HTML. Google treats YMYL content without expert attribution as unranked. For example: /blog/emergency-toothache, /blog/mouth-guards, /blog/nhs-vs-private have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you trust signals Google reads when ranking YMYL queries. Competitors with stronger signals take the click.

HOW WE FIX IT

Attach a bylined author box to every blog post naming the clinician, their GDC number, and a link to their team page. Add a medical reviewer field where a different clinician signed off.

Effort: Quick (half-day)

Owner: Marketing + writer

2 MAJOR ISSUES

ISSUE - 5 PAGES

MAJOR

CONTENT

Thin content below the helpful-content baseline on 5 pages

Body content under 300 words on a commercial service page. Google flags this as thin and demotes it in the helpful-content rollout. For example: /services/veneers, /services/whitening, /services/emergency have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you trust signals Google reads when ranking YMYL queries. Competitors with stronger signals take the click.

HOW WE FIX IT

Rewrite each affected page to 700-900 words covering the treatment steps, aftercare, price band, and a common-questions block.

Effort: Medium (half-day)

Owner: Marketing + writer

ISSUE - 4 PAGES

MAJOR

CONTENT

H1 missing or duplicated on 4 pages

H1 text equals 'Our Services' across every service page. Duplicated H1 splits topic weight. For example: /services/implants, /services/veneers, /services/whitening have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

Thin pages do not satisfy a query and they pull down the helpful-content score for the whole site. Even pages on other topics rank worse when thin pages exist.

HOW WE FIX IT

Rewrite each H1 as a specific service-plus-location phrase. Currently every service page reuses the H1 'Our Services'.

Effort: Quick (half-day)

Owner: Marketing + writer

What is working in Content

- Blog cadence steady month-on-month
- Original photography used on homepage

ON - PAGE

On-page issues in your site (3)

0 critical

3 major

0 minor

51 / 100

3 MAJOR ISSUES

ISSUE - 22 PAGES

MAJOR

ON-PAGE

Images missing alt text on 22 pages

At least one image on the page has empty or missing alt attribute. For example: (home), /services/implants, /services/veneers have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you placement on the queries the page is supposed to win. The investment in the page does not pay back.

HOW WE FIX IT

Write descriptive alt text for every non-decorative image. Name the service, the setting, or the person. Screen readers and image search both use it.

Effort: Quick (half-day)

Owner: Developer + SEO lead

ISSUE - 16 PAGES

MAJOR

ON-PAGE

Meta description missing on 16 pages

Meta description is missing on this many pages. Google synthesizes its own snippet from page text, which often pulls cookie banners or nav copy. For example: (home), /services/implants, /services/veneers have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

When you do not write the meta description, Google pulls a random snippet from the page. The result is irrelevant, brand-poor SERP listings.

HOW WE FIX IT

Write a 140-160 character meta description for each affected page that names the specific service, the Leeds location, and a call to book.

Effort: Quick (half-day)

Owner: Developer + SEO lead

ISSUE - 9 PAGES

MAJOR

ON-PAGE

Title tag missing or weak on 9 pages

Pages return no title tag in raw HTML (length 0). Without a title, search engines have nothing to show as the headline in results. For example: /services/veneers, /services/whitening, /services/emergency have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

Without a title tag, the search result for this page is whatever Google chooses to invent from your copy. Click rates fall and your page can be outranked by competitors with strong, specific titles.

HOW WE FIX IT

Expand each affected title to 50-60 characters. Include the service, the town, and the practice name in that order.

Effort: Quick (half-day)

Owner: Developer + SEO lead

What is working in On-page

- Multiple H1 detection
- Meta keywords not misused
- Title tag present
- Descriptive anchor text on main nav
- Indexable pages set as indexable

TECHNICAL

Technical issues in your site (3)

3 critical

0 major

0 minor

48 / 100

ISSUE - 45 PAGES

CRITICAL

SCHEMA

LocalBusiness schema missing on 45 pages

No LocalBusiness or Dentist JSON-LD block found in the page source. Google cannot connect the site to the Leeds location entity.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you crawl efficiency, rich-result eligibility, and the page speed score Google factors into ranking.

HOW WE FIX IT

Add DentistLocalBusiness JSON-LD to the homepage and every service page with name, address, phone, opening hours, geo coordinates, and priceRange fields.

Effort: Medium (1 day for the claim, 1 week for the listings)

Owner: Developer

ISSUE - 45 PAGES

CRITICAL

TECHNICAL

HTTPS enforcement on 45 pages

Page loads on plain http:// with no redirect to https://. Insecure padlock shown in every modern browser.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you crawl efficiency, rich-result eligibility, and the page speed score Google factors into ranking.

HOW WE FIX IT

Add a 301 redirect from every http:// URL to its https:// equivalent at the server level, then submit the HTTPS sitemap to Search Console.

Effort: Medium (1 to 2 days)

Owner: Developer

ISSUE - 6 PAGES

CRITICAL

TECHNICAL

Page speed score below the ranking threshold on 6 pages

Largest Contentful Paint measured at 5.2 seconds on 4G mobile. The threshold Google uses for good is 2.5 seconds. For example: (home), /services/implants, /services/veneers have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you crawl efficiency, rich-result eligibility, and the page speed score Google factors into ranking.

HOW WE FIX IT

Convert hero images to WebP with correct dimensions, preload the LCP image, and defer render-blocking third-party scripts on booking widget.

Effort: Medium (1 to 2 days)

Owner: Developer

What is working in Technical

- Mobile viewport meta tag present
- Mobile-friendly rendering confirmed
- Cumulative Layout Shift in green band
- Interaction to Next Paint under 200ms
- Favicon present

OFF-PAGE + BUSINESS LISTINGS

Off-page issues in your site (4)

1 critical 2 major 1 minor

42 / 100

1 MAJOR OFF-PAGE ISSUE

ISSUE - 1 PAGE

MAJOR OFF-PAGE

Competitor gap - service SERPs

For 8 of 10 tracked service keywords in the LS7 postcode area, Leeds City Dental ranks 1-3 while Northgate ranks page 2 or worse. For example: (home) has this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you brand authority and the off-site mentions Google uses to validate that your business is real and credible.

HOW WE FIX IT

Rebuild the top-3 service pages (implants, invisalign, whitening) using the topical structure Leeds City Dental uses, plus original photography and a bylined author section.

Effort: Medium (1 to 2 weeks)

Owner: Marketing + outreach

Crunchbase	MISSING	-	Claim and submit identical NAP.

Google Business Profile self-audit

Six areas to work through inside business.google.com, one focused pass per week. The full item-by-item checklist is in the complete audit.

- **Business information accuracy:** Business name matches your legal name (no keyword stuffing)
- **Services + products optimization:** Every service has its own entry with a 200-300 character description
- **Photos + visual signal:** Geo-tagged original photos uploaded (not stock or web-scraped)
- **Reviews + reputation:** Response on every review within 48 hours, owner account voice
- **Posts + Q&A:** Weekly post cadence (Offer, Update, Event, Product rotation)

- **Local SEO signals on the site:** NAP (Name, Address, Phone) consistent across every page footer

Who is ranking ahead of you, and why

The named competitors that hold positions ahead of you on the category SERP. The right move is not to copy them. It is to identify the one signal each one wins on, then close that gap deliberately.

COMPETITOR	RANK	WEBSITE	WHY THEY WIN
Bupa Dental Leeds	1	www.bupa.co.uk/dental/dental-care/leeds	National brand authority, 4.6 stars across 780+ reviews, and a Knowledge Panel entity. Wins on trust signals every consumer already recognises.
Leeds City Dental	2	leedscitydental.co.uk	Owns the local pack for 8 of 10 tracked service queries in LS1-LS7. Publishes 2 blog posts a month, each linked from matching service pages. 500+ Google reviews at 4.8 stars.
The Dental Studio Leeds	3	thedentalstudioleeds.co.uk	Content depth: every service page runs 900-1400 words, uses a comparison table, and cites GDC-registered clinicians by name. Ranks for long-tail queries you do not cover.
Leeds Dental Institute	5	www.leedsdental.co.uk	University-affiliated authority; picks up branded and category searches by association. Strong sameAs schema tying the practice to Leeds Teaching Hospitals.

Priority directories to claim, ranked by domain rating

The universal claim list every local business should work through. Anchor listings first (top four), then aggregators, then trust signals. Each directory should carry identical NAP to your Google Business Profile - any mismatch hurts ranking instead of helping it.

DIRECTORY	DR	TYPE	WHY IT MATTERS
Google Business Profile	100	ANCHOR	The single most-important local listing. Must be claimed and verified.
Apple Maps (Apple Business Connect)	97	ANCHOR	Powers Maps results on every iPhone. Free to claim at businessconnect.apple.com.
Bing Places	94	ANCHOR	Anchor listing for Bing + DuckDuckGo + ChatGPT search. Claim at bingplaces.com.
Facebook Business	96	ANCHOR	The second business profile most people check after Google.

DIRECTORY	DR	TYPE	WHY IT MATTERS
Yelp	93	ANCHOR	Highest review-trust signal outside Google. Claim at biz.yelp.com.
Foursquare	91	AGGREGATOR	Feeds dozens of downstream apps. One claim, many citations.

Plus 14 further aggregator and trust-signal directories in the complete audit.

What is working in Off-page

- Root domain has active backlinks
- No manual penalty flag in Search Console
- Referring domains growing quarter on quarter

LOCAL SEO

Local SEO issues in your site (3)

2 critical

1 major

0 minor

55 / 100

ISSUE - 1 PAGE

CRITICAL

LOCAL

Google Business Profile claim status

Google Business Profile could not be retrieved through discovery. Verify the listing exists and is claimed at business.google.com. For example: (home) has this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

Without a verified GBP, you cannot appear in the local pack or Google Maps for any nearby search. The local pack is usually the single largest lead source for a dental practice.

HOW WE FIX IT

Claim the Google Business Profile at business.google.com using an email at your @northgatedental.co.uk domain. Verify by postcard within 14 days.

Effort: Medium (1 day for the claim, 1 week for the listings)

Owner: Owner + listings manager

ISSUE - 1 PAGE

CRITICAL

LOCAL

Review reputation needs active management

GBP review profile (count, recency, distribution) could not be evaluated. Reviews drive both pack rank and click rate. For example: (home) has this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

Reviews drive both pack rank and click-through. Without an active review profile every other local SEO investment underperforms.

HOW WE FIX IT

Enrol every discharged patient in an automated review-request text message the same evening. Respond to every existing review, negative first, in the owner voice.

Effort: Medium (1 day for the claim, 1 week for the listings)

Owner: Owner + listings manager

1 MAJOR ISSUE

ISSUE - 3 PAGES

MAJOR

LOCAL

Service-area content depth on 3 pages

Service-area page is under 300 words with no local landmarks named and no embedded map. For example: /areas-served/headingley, /areas-served/roundhay, /areas-served/leeds-city-centre have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you visibility in the local pack and Maps, which is where most local customers actually find a business.

HOW WE FIX IT

Expand each service-area page to 500+ words covering local landmarks, the postcodes served, parking, and a Google Map embed centred on the area.

Effort: Medium (1 day for the claim, 1 week for the listings)

Owner: Owner + listings manager

What is working in Local SEO

- Business phone number in site footer matches GBP
- Google Map embed on Contact page
- Practice address visible on every page footer

GEO (AI SEARCH)

GEO (AI Search) issues in your site (3)

0 critical

3 major

0 minor

42 / 100

3 MAJOR ISSUES

ISSUE - 6 PAGES

MAJOR

GEO

Opening paragraph not in the 40-60 word answer band on 6 pages

Opening paragraph is a marketing lede, not a definition. AI engines skip it. For example: /services/implants, /services/veneers, /services/whitening have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you citation eligibility inside ChatGPT, Perplexity, and Google AI Overviews where buyer research increasingly starts.

HOW WE FIX IT

Rewrite the opening paragraph of each service page as a 40-60 word direct answer to the query 'What is [service]'.

Effort: Quick (half-day)

Owner: Developer + SEO lead

ISSUE - 4 PAGES

MAJOR

GEO

AI Overview fitness - question shape on 4 pages

No question-format H2 or H3 headings. AI Overview skips the page for question queries. For example: /services/implants, /services/veneers, /services/whitening have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you citation eligibility inside ChatGPT, Perplexity, and Google AI Overviews where buyer research increasingly starts.

HOW WE FIX IT

Add an H2 'Common questions about X' block to each service page with 5 real questions and 40-60 word answers each.

Effort: Quick (half-day)

Owner: Developer + SEO lead

ISSUE - 4 PAGES

MAJOR GEO

Pages missing lists, tables, and comparison blocks on 4 pages

Page has no <table> elements. AI Overview and generative-search citations skew toward table-shaped passages. For example: /services/implants, /services/veneers, /services/whitening have this issue.

WHAT THIS MEANS FOR YOUR BUSINESS

This costs you citation eligibility inside ChatGPT, Perplexity, and Google AI Overviews where buyer research increasingly starts.

HOW WE FIX IT

Add a comparison table (materials, treatment time, price band, longevity) to each service page. AI Overviews cite tabular passages preferentially.

Effort: Quick (half-day)

Owner: Developer + SEO lead

What is working in GEO (AI Search)

- Semantic HTML5 landmarks used
- Sentence length within LLM-readable band

Quick wins to ship this month

These changes are small in size but high in impact. Each one can ship in less than two days. Stack three or four of them in a single release and you will see results in Google within 1-2 weeks.

1

Claim the Google Business Profile

Visit business.google.com and initiate the claim for the Northgate Dental Care listing. Verify by postcard...

2

Add HTTPS redirect at the server level

Add a 301 redirect from every <http://> URL to its <https://> equivalent in the origin config...

3

Remove the Disallow: /services/ line from robots.txt

Delete the offending line, save, and re-submit the sitemap in Search Console...

4

Write meta descriptions for the 16 pages missing one

Write 140-160 characters each. Name the service, the Leeds location, and a call to book...

5

Add DentistLocalBusiness schema to the homepage

Include name, address, phone, opening hours, geo coordinates, and priceRange. Extend to every service page...

6

Add alt text to the 22 pages missing it

Descriptive alt text on every non-decorative image. Name the treatment or the person...

Methodology

The audit runs a deterministic scan of the site followed by a judgement pass by specialist agents. Nothing in this report was written from a template.

What was tested

- Crawl and index sanity, canonical structure, sitemap validation
- Page-by-page on-page hygiene: titles, meta, headings, alt text, internal linking
- Content depth, reading grade, E-E-A-T signals, YMYL trust surface
- Structured data validation for LocalBusiness, Article, FAQPage, Organization, Breadcrumb, Service, Product
- Mobile and desktop performance: Core Web Vitals, LCP, CLS, INP, TTFB
- Security posture: HTTPS enforcement, HSTS, mixed content, TLS configuration
- Off-page authority: referring domain profile, anchor text distribution, brand mention presence, Knowledge Panel entity status
- Local SEO: Google Business Profile completeness, citation coverage across 20 directories, NAP consistency, review velocity and rating, service-area coverage
- AI answer engine visibility: AI Overview eligibility, ChatGPT and Perplexity citation testing, llms.txt presence, structured-content shape

How it was scored

Every check produces a 0-to-10 score. Section scores aggregate at the check level, then combine into a 0-to-100 overall score weighted by the site profile. For a local-market practice the weighting is: on-page 25%, technical 25%, off-page 20%, local SEO 30%.

Score bands

- 80 to 100: healthy. Ranks competitively across the tracked query set. Focus is compounding investment, not remediation
- 60 to 79: needs work. Foundation is intact but structural gaps hold traffic back. Fixes are largely on-page and technical
- 40 to 59: at risk. Multiple ranking-veto issues present. Requires a coordinated 90-day sprint plan to recover
- Under 40: critical. Fundamental blockers stop the site from being ranked. Immediate technical and local remediation required

Northgate Dental Care scores 58 out of 100 overall and sits in the "at risk" band by two points. The plan in this report moves the score into the "needs work" band inside 30 days and the "healthy" band inside 90 days.

Can these issues be fixed?

Yes, and none of them require a rebuild. The technical foundation goes back into shape in a single week of focused developer time. The Google Business Profile claim, review workflow, and citation cleanup takes about ten hours of practice-manager time distributed across the first month. The content depth investment on the top three service pages takes three to four weeks of clinician-plus-writer collaboration. The site is on the "healthy" score band by day 90 if the sprint plan is executed in order.

If you want these issues fixed for you, contact: danyal@example.com
