

AIOS · SERVICE TIERS

What You Get at Each Level

Free · Semi-Automated · Fully Automated

A plain, side-by-side comparison of the features the client gets — and what each one costs us to run — across the three levels of automation in the AIOS platform. Every feature from the plan is listed so nothing is missed.

Free

\$0 to run

Semi-Automated

~\$20 / client

Fully Automated

~\$54 / client

What each tier
includes

How the tiers work

Every feature can run in one of three ways — on paid API, by hand, or switched off — and you set this **per client, per feature**. So cost is a dial you turn, not a fixed bill. The three tiers below are just handy presets; a single client can also be "mostly middle tier, with two features on the top tier."

The dial

Each feature is API, by hand, or off — per client. Turn one on the day that client's budget allows. Nothing has to be rebuilt.

The safety check

A person approves everything before it reaches a client — every report, email and website change — in all three tiers.

Shared cost

The server, database, backups, domain, email and the encrypted key vault cost ~\$44-64 / month total and are shared by everyone. The tier prices below are the extra cost per client.

THE SHORT VERSION — IN PLAIN TERMS

IN PLAIN TERMS	FREE \$0 / CLIENT	SEMI-AUTOMATED ~\$20 / CLIENT	FULLY AUTOMATED ~\$54 / CLIENT
How accurate are the rankings?	Rough (Google's average)	Good (weekly)	Best — exact position, daily
How much runs by itself?	Nothing	Some	Almost everything
How fresh is the data?	Only when you ask	Weekly	Daily / live
Backlink data?	Your uploads only	Uploads + full analysis	Live + watched weekly
How safe are your keys?	Encrypted key vault	Encrypted key vault	Encrypted key vault
Cost to run (per client / month)	\$0	~\$20	~\$54
Best for	Trying it out / leads	Most clients — best value	Premium clients who want it hands-off

The next four pages list every feature in the plan, grouped by area. **Security is the same in every tier** — all keys stay in the encrypted vault.

Data, rankings & site health

How to read: "by hand" = a person does it · "auto" = runs on its own · ✓ included · ✗ not included.

A. YOUR DATA & RANKINGS

FEATURE	FREE	SEMI-AUTOMATED	FULLY AUTOMATED
Google traffic (Search Console + Analytics)	✓ Free, always on	✓ Yes	✓ Yes
Keyword rankings — where the number comes from	Search Console average + serper.dev quick checks	serper.dev on a schedule, or DataForSEO for top keywords	DataForSEO — the most accurate rankings
How often rankings update	Only when you ask	Weekly, for chosen keywords	Every night — all keywords, cities & devices
Local map-pack rankings (city grid)	✗	Upload from a tool (Local Falcon / BrightLocal)	Tracked auto (later phase)
Keyword research (search volume & difficulty)	Upload your own file	Cheap data + AI grouping, you pick the winners	Full keyword data, grouped auto
Extra Google boxes (snippets, "People also ask")	✗	From your uploads	Tracked auto
Google AI Overview (AI answer box) tracking	✗	From your uploads	Tracked auto, per keyword
How your data gets in	You upload spreadsheets (free)	Upload the costly data, cheap API for the rest	Live from paid APIs

B. AUDITS & SITE HEALTH

FEATURE	FREE	SEMI-AUTOMATED	FULLY AUTOMATED
Full technical site audit	Upload a Screaming Frog file, or 1 free sample audit	On request (cloud crawl or your upload); AI lists the fixes	Runs weekly on its own; AI ranks the fixes onto your task list
Page speed (Core Web Vitals)	✗	On request (free Google tools)	Checked every crawl; warns you if it drops
Crawl & indexing checks (robots, sitemap, orphan pages)	✗	On request	Auto
Redirect chains & broken links (404s)	✗	On request	Auto, worst ones flagged first
Schema / structured data (rich results)	✗	AI writes it, you add it	AI writes + checks it, added for you
Keyword cannibalization (pages competing)	✗	On request	Auto
Internal linking suggestions	✗	On request	Auto

03 FULL FEATURE LIST · 2 OF 4

Backlinks & content

C. BACKLINKS (OFF-PAGE)

FEATURE	FREE	SEMI-AUTOMATED	FULLY AUTOMATED
Backlink list (who links to the site)	Upload your own file	Upload from your Ahrefs / SEMrush seat (no extra cost)	Pulled auto every week
New & lost links (weekly changes)	X	We compare your weekly uploads	Auto, with alerts
Domain strength & spam / toxic-link score	X	From your uploads	Scored auto
Competitor backlink gaps (link ideas)	X	By hand	Auto (later phase)
Are your links indexed by Google?	X	Manual spot-check	Auto
Outreach emails for new links	X	AI drafts, a person sends	Warmed inboxes send sequences (still approved) — later phase

D. CONTENT & PUBLISHING

FEATURE	FREE	SEMI-AUTOMATED	FULLY AUTOMATED
Blog articles	No (1 sample only)	AI writes a draft, a person edits & posts	Drafts queued auto, posted after one approval
Home / service / location page copy	X	AI drafts, you apply	Drafted + published for you
Page titles & meta descriptions	X	AI drafts, you add	Made in bulk + added to the site
Google Business posts	X	AI drafts, you post	Posted auto on a calendar
Images (blog featured / geotagged)	X	Made on request	Made on a schedule
Publishing to the website (WordPress)	X	You publish by hand	Auto-published after approval (later phase)
Web 2.0 / extra sites (Medium, Blogger, Tumblr)	X	AI drafts, you post	Drafted; posting stays by hand

Local, competitors & reporting

E. LOCAL SEO (GOOGLE BUSINESS PROFILE)

FEATURE	FREE	SEMI-AUTOMATED	FULLY AUTOMATED
Business Profile optimization (description, categories)	X	AI suggests, you apply	Same, plus tracked
Google Business posting	X	Drafts, you post	Auto-posts (direct API publish is a later phase)
Reviews — monitor & reply	X	AI drafts replies, you send	Auto-reply to good reviews; a person approves bad ones
Citations (directory listings)	X	Bulk submit + some by hand	At scale
Name / address / phone consistency	X	On request	Watched auto

F. COMPETITORS & STRATEGY

FEATURE	FREE	SEMI-AUTOMATED	FULLY AUTOMATED
Competitor analysis (SWOT)	X	Upload competitor data + AI writes it up	Auto
Monthly competitor watch (share of voice)	X	By hand	Auto, every month
SEO strategy (AI-assisted, a human decides)	X	AI drafts, a strategist decides	Same, refreshed with live data
Content plan (funnel-based calendar)	X	AI drafts, you edit	Auto-generated, you edit

G. REPORTS, ALERTS & WORKFLOW

FEATURE	FREE	SEMI-AUTOMATED	FULLY AUTOMATED
Monthly client report	On request, basic branding	Data pulled + AI write-up, you edit, your branding	Built & sent on a schedule (only if data is fresh)
Rank-drop & lost-link alerts	X	Weekly summary inside the report	Sent the moment it happens (to your board / Slack)
Task / to-do board	X	✓ Findings land here	✓ Filled auto from audits & alerts
Client login portal	Basic (rankings + traffic)	Full read-only portal	Full portal + live updates
A person approves before it reaches the client	✓ Yes	✓ Yes	✓ Yes — always, never skipped

The three tiers, in plain words

Free

\$0 to run

A free version to show the client what they'd get.

The client pays nothing and we spend nothing on data. They get their **Google traffic** (Search Console + Analytics), can upload their own spreadsheets (cleaned up the same way as paid data), get quick rank checks (serper.dev free tier, 2,500/month), one free public audit to prove value, and a basic login with on-request reports. There is no automation and no paid data. Even here, any key you give us is kept in the encrypted vault.

Best for: trials, and turning leads into paying clients.

BASIS: THE \$0 SETUP IN THE PLAN

Semi-Automated

~\$20 / client / month

Best value — high quality, low cost.

We keep quality high and cost low by doing the expensive parts by hand and automating the cheap parts. **Backlinks** (the most expensive data) stay manual — we upload from a tool you already pay for, so it costs \$0 extra and is about 5× cheaper than the backlink API. AI writes the drafts; a person edits and publishes everything. We cut the AI bill with caching (~90% off) and overnight batches (50% off). You can switch any one client's feature to full API the day their budget allows.

Best for: most clients — the standard package.

BASIS: THE "COST-OPTIMIZED" SETUP — ABOUT \$305 / MONTH FOR ALL 15 CLIENTS

Fully Automated

~\$54 / client / month

Hands-off — it runs itself.

Everything the middle tier does by hand now runs on a schedule using paid APIs (**DataForSEO** for rankings, keywords, backlinks and audits). Rankings update nightly, backlinks and audits weekly, and reports build and send themselves once the data is fresh. Google Business posts, review replies and website publishing all happen automatically — you only click "approve." The final quality is the same as the other tiers, because a person still approves everything before it reaches the client.

Best for: premium clients who want it completely hands-off.

BASIS: THE "ALL-API" SETUP — ABOUT \$804 / MONTH FOR ALL 15 CLIENTS

06 THE NUMBERS

What it costs to run

PER CLIENT / MONTH	FREE	SEMI-AUTOMATED	FULLY AUTOMATED
Cost to run (our cost)	\$0	~\$20	~\$54
All 15 clients together	shares base cost	~\$305 / mo	~\$804 / mo

What you charge the client

Your call — not set in the plan. Your labour costs about **\$12 / hour**, so the margin on the two paid tiers is large.

What makes up the cost

Shared base (server, database, backups, domain, email, encrypted key vault): **~\$44–64 / month**, all tiers. DataForSEO: ~\$29 / month for all 15 (rankings \$13.50 · audits \$7.20 · backlinks ~\$8). Claude AI: ~\$140 / month (budget \$250). SEMrush / Ahrefs seats or API: ~\$450 / month — the big jump to the top tier. Google data: \$0. The key vault is \$0 extra — it's built into Supabase, which is already in the shared base.

A FEW THINGS TO KEEP IN MIND

- **Where the tiers come from.** Semi-Automated is the plan's "cost-optimized" setup; Fully Automated is the "all-API" setup; Free is a \$0 setup built only from free things.
- **A person always approves.** Every report, email and published change is checked by a human first — in every tier. The top tier removes the manual work, not the approval.
- **Security is the same in every tier.** All API keys and passwords live in an encrypted key vault (Supabase Vault) — never in plain text. Paying more buys fresher data, not more security.
- **The prices here are our running cost, not what you charge the client.**

ONE THING TO DECIDE FIRST — THE RANKINGS SOURCE

The main plan and full tool list say use **DataForSEO** for rankings (Search Console shows an average, not the real position); the client setup checklist says **serper.dev**. This comparison uses serper.dev / Google for the cheaper tiers and DataForSEO for the top tier — but please pick one official rankings source before we build, because the cost and the data pipeline both depend on it.
