

HOW TO USE IT · IN THE BROWSER

The Dashboard

The point-and-click control surface for your team — no technical skill needed. Log in, and every module is one tab away.

GETTING STARTED

Log in & find your way

- 1 Open **app.qanry.com** and sign in with your account (one form — the system routes you to the right portal).
- 2 The left rail is the menu — hover to expand. Modules: **Content** · **Citations** · **Off-page** · **Audit** · **Policy Radar** · **Reports** · **Clients**.
- 3 Pick a client where asked — everything is scoped to that client's real data.

Create content (the 5-step wizard)

[1 Pick pages]→[2 Design + template]→[3 Details]→[4 Preview]→[5 Approve → WordPress]

- **Step 1** — research a page set from a URL, **or skip it** and type one page title to add it directly.
- **Step 2** — pick one of the 7 layout templates + optionally copy the client's colours/fonts.
- **Step 3** — client, framework, and the **required** proof/first-hand details (won't generate without them).
- **Step 4-5** — preview the draft + images, then approve to push a WordPress **draft** (never auto-live).

Audit → Build → Finish

[1 Audit a client]→[Build the missing]→[Ready to finish (login + click)]→[All listings]

- 1 **Audit** — pick a client, run the audit; it shows what's already listed, missing, or inconsistent.
- 2 **Build** — queue the missing directories; the bot creates the accounts + fills the listings.
- 3 **Ready to finish** — a panel lists every prepared account with its **login shown**; open the directory, click Publish, mark it done. (The final click runs via the local tool — see the Local guide.)
- 4 **All listings** — monitor every citation's status, filter, and bulk-sync inconsistent ones.

Good to know

- Nothing publishes on its own — content is drafted for review; listings prepared for your click.
- The dashboard is now **responsive** — usable on a tablet or phone.
- Blog images generate in **landscape** so page layouts stay clean.
