

HOW TO USE IT · ON YOUR DESKTOP

Double-click to finish

Some directories need one human click at the very end. This runs on your machine, opens each in a real browser — logged in and pre-filled — so you just click Publish.

THE ONE-FILE WAY

Finish-Citations.bat

In the project folder there's a file called **Finish-Citations.bat**. Double-click it — that's it.

- 1 Double-click **Finish-Citations.bat** in the `danyals-aos` folder.
- 2 It lists every citation that's ready to finish (with its login email).
- 3 Type a directory name (e.g. **Avvo**) — or type **ALL** to walk every one.
- 4 A real browser opens, **already logged in and pre-filled**. Do the one human step (pick a category / solve a captcha) and click **Publish**.
- 5 **Close the window** — the next directory opens automatically.

Why local?

A hosted dashboard can't keep a live, logged-in browser session open for a directory. Your desktop can. So this last-mile finisher runs on your machine — everything up to the click is still done for you.

If it doesn't open

Requirements

- Windows + the project folder on the machine.
- The Python environment at `backend\.venv` (already set up).
- A browser (Chromium) – installed with the tools.

Run it by name (optional)

```
backend\.venv\Scripts\python tools\finish_citation.py "wellness.com"
```

Do one at a time so each window is focused.
Logins are in the file the tool reads; all share one password.

What it does for you, automatically

- Logs into the directory with the bot-created account.
- Opens the add-listing page + fills the business name, address, phone, website.
- Leaves ONLY the bot-proof step (category / captcha) + the final Publish click to you.
