

AIOS Command Guide

Every slash command, explained.

Your whole SEO platform runs on plain-language commands. Type **/aios-** in the AIOS assistant and pick the job — audits, content, links, reports, rankings and more. This guide is the full menu.

31 commands

8 modules

One assistant

Contents

1 Audit

4 commands

Run an SEO health check and read the technical, local & AI-search findings.

2 Content

4 commands

Write ranking-grade pages, blogs, local pages and SERP snippets.

3 Off-page

5 commands

Backlinks, toxic-link cleanup, citations/NAP and Web 2.0 properties.

4 Policy Radar

2 commands

Track Google updates and turn them into client-facing advisories.

5 Reports

3 commands

Refresh client workbooks and push the monthly report to Google Sheets.

6 Team & Delivery

4 commands

Task queue, assignments, delivery milestones and client health.

7 Tools

8 commands

Keywords, rank tracking, competitors, on-page, local, onboarding, imports, billing.

8 Upsells

1 command

Manage the add-on gig catalogue the client portal renders.

WHAT THE BADGES MEAN

READ

Safe · view-only

SPENDS

Uses metered AI / data budget

LEAD

Owner / admin / manager only

LIVE

Publishes / edits a live asset

OWNER

Owner / admin only

1

Type /aios-

Open the AIOS assistant and start with the prefix – the menu filters as you type.

2

Add the details

Name the client and anything in **Inputs**, or just describe it in plain words.

3

Review & approve

Anything that spends or publishes waits for a human OK – nothing goes live by surprise.

1 Audit

Health-check any URL, then read the findings that matter

4 commands

/aios-audit

LEAD

SPENDS*

Run a full SEO audit on a website

Runs a Free or Paid audit through the engine, tracks the board, and pulls the report PDF & findings, then explains the top issues in plain English. (*Paid runs spend metered budget.)

SAY *"audit this site" · "run an SEO health check on this URL"*

INPUTS *client url tier types*

/aios-technical-audit

READ

Turn technical findings into a fix list

Reads crawl/index, Core Web Vitals, rendering, schema and security findings into a prioritized, evidence-backed list of what to fix first.

SAY *"technical SEO" · "Core Web Vitals" · "schema errors"*

INPUTS *audit-id | client | url*

/aios-local-audit

READ

Read the local SEO findings

Interprets Google Business Profile, citations/NAP, reviews and map-pack findings into a local action plan.

SAY *"local SEO" · "GBP" · "map pack ranking"*

INPUTS *audit-id | client | url*

/aios-geo-audit

READ

AI-search (GEO) readiness plan

Reads AI-Overview readiness, answer extractability, llms.txt and AI-crawler access — will ChatGPT & Perplexity cite this page?

SAY *"GEO" · "AI Overviews" · "LLM visibility"*

INPUTS *audit-id | client | url*

2 Content

Ranking-grade pages, every one through the QA gate

4 commands

/aios-content

SPENDS

LEAD

The content hub — make any page

Create a service, blog or local page, recommend a research-first page set and bulk-generate it, match a site's design, read the content board, and run the human review gate.

SAY *"write content" · "recommend a page set" · "what's awaiting review"*

INPUTS

client

page-type

topic

/aios-blog-post

SPENDS

LEAD

Write a ranking-grade blog post

Generates an informational article grounded in the client's context with an extractable answer block and FAQ, then runs the 14-point QA gate for approval.

SAY *"write a blog on..." · "a how-to guide for this client"*

INPUTS

client

topic

/aios-local-service-page

SPENDS

LEAD

Build a city + service landing page

Generates a "service in city" / "near me" landing page grounded in fresh context, with JSON-LD and a QA scorecard for a human to approve.

SAY *"a service-in-city page" · "a near-me landing page"*

INPUTS

client

city

service

/aios-titles-meta

SPENDS

LEAD

Fix SERP titles & meta descriptions

Writes or repairs a title tag (keyword front-loaded, under ~60 chars) and meta description (under ~155, with a hook + CTA) and returns character counts.

SAY *"titles and meta" · "fix this thin title tag"*

INPUTS

client

topic

3 Off-page

Links, citations and Web 2.0 — every write is guarded

5 commands

/aios-offpage

READ

The off-page hub

Reads the backlink profile, citation/NAP listings and Web 2.0 ledger, and routes any write to the right guarded command below.

SAY *"off-page" · "referring domains" · "off-page KPIs"*

INPUTS

/aios-backlink-audit

LEAD

Flag toxic backlinks for disavow

Reviews the referring-domain profile and anchor toxicity, then queues at-threshold spam links for a disavow review (it does not submit to Google).

SAY *"backlink audit" · "toxic links" · "disavow"*

INPUTS

/aios-citation-builder

LEAD

Reconcile the citation / NAP board

Reads directory listings by NAP status and the audit plan, and on a lead's go marks a missing or drifted listing consistent — single or bulk.

SAY *"citations" · "NAP consistency" · "which directories are missing"*

INPUTS

/aios-citation-submit

LEAD

SPENDS

Run a real citation campaign

Sets the client's canonical NAP and dispatches a live submission campaign across the directory catalog — actually creating new listings (~1¢/directory).

SAY *"submit citations" · "list this client on directories"*

INPUTS

/aios-web2-build

LEAD

SPENDS

LIVE

Build a Web 2.0 link property

Plans a branded WordPress.com / Blogger / Tumblr / Medium property carrying one editorial backlink, drafts it, and holds at the quality gate — never auto-publishes.

SAY *"web 2.0" · "build a tiered link property"*

INPUTS

4 Policy Radar

Stay ahead of Google updates

2 commands

/aios-policy-radar

READ

ASK SPENDS

The Google-update radar

Reads watched sources, detected change-events, the knowledge base and open recommendations, and answers an on-demand policy question. Reads are free; asking spends one metered call.

SAY *"policy" · "core update" · "ask policy radar about..."*

INPUTS *rec-status | ask-topic*

/aios-policy-brief

LEAD

Turn an update into a client advisory

Writes what changed, who is exposed, and the recommended action — and on a lead's confirm, applies the recommendation on top of the untouched audit.

SAY *"client impact of the core update" · "apply this recommendation"*

INPUTS *change-or-rec-id*

5 Reports

Client workbooks & Google Sheets

3 commands

/aios-report

LEAD

Refresh one client's workbook

The reports hub — reads workbooks, the sync feed and the Sheets connection, then flushes one client's buffer to its sheet.

SAY *"refresh the workbook" · "sync the sheet"*

INPUTS *client-or-workbook-id*

/aios-monthly-report

SPENDS

LEAD

The AI-written monthly report

Assembles a branded narrative built strictly from real numbers — audit deltas, content shipped, milestones, off-page, spend — then syncs the workbook. It invents nothing.

SAY *"monthly report" · "end-of-month client summary"*

INPUTS *client* *month*

/aios-sheets-sync

LEAD

Push every workbook at once

Flushes every client report workbook to its Google Sheet in one pass and confirms the pushes via the sync feed.

SAY *"sync all sheets" · "push all reports to Sheets"*

INPUTS *no inputs*

/aios-client-snapshot

READ

One-page client health brief

The client profile, its living AI context (summary + folded facts), how fresh that context is, and where they sit in the rollup — so you instantly know a client.

SAY *"snapshot" · "brief me on this client" · "the one-pager"*

INPUTS

/aios-team-status

READ

Who is working on what

Reads the team's live workload — your own record and metrics, the task queue (yours or a named member's), and the Command Center team feed.

SAY *"team status" · "my tasks" · "my queue"*

INPUTS

/aios-assign-task

LEAD

Assign & route work

Creates and routes a task to a staff member — validating the assignee, snapshotting the client, and stamping priority and due date. Content tasks carry the review gate.

SAY *"assign" · "delegate" · "create a task for..."*

INPUTS

/aios-milestones

READ

Delivery timeline & stalled projects

Reads the five-stage delivery timeline per engagement and the recently-advanced feed, and surfaces stalled or blocked projects.

SAY *"milestones" · "project status" · "which projects are stalled"*

INPUTS

7 Tools

The specialist toolkit — keywords to billing

8 commands · 1 / 2

/aios-keyword-research

SPENDS

Research keywords into the bank

Researches keywords from a seed, saves them with volume, difficulty, intent and clusters, and reports cannibalization conflicts.

SAY *"keyword research" · "keyword ideas from a seed" · "keyword clusters"*

INPUTS

client

seed

/aios-rank-report

LEAD / 402

Keyword rankings & movement

Reports current positions, movement, best-ever and unranked terms — and prices the monthly commitment before any keyword is added.

SAY *"where do we rank" · "add tracked keywords" · "what does tracking cost"*

INPUTS

client

action

/aios-competitor-intel

SPENDS

Competitor gaps & share of voice

Analyzes tracked competitors and reports keyword gaps, overlap and an estimated share of voice. Add, discover or stop tracking a rival.

SAY *"competitor analysis" · "what do they rank for that we don't"*

INPUTS

client

competitor-domain

/aios-on-page-fix

LEAD

LIVE

Apply an on-page fix to the live site

Analyzes a page and applies an approved title/meta fix to the client's live WordPress behind a drift guard — needs a literal confirm and never overwrites a page edited since analysis.

SAY *"on-page analysis" · "apply / revert this fix"*

INPUTS

client

page-url

action

/aios-local-seo

SPENDS

Map-pack ranks & GBP health

Reports map-pack rankings and audits Google Business Profile completeness and NAP consistency across directories. Add a local keyword or refresh ranks.

SAY *"map-pack rankings" · "do we show in the 3-pack" · "GBP completeness"*

INPUTS

client

location

7 Tools

The specialist toolkit — continued

8 commands · 2 / 2

/aios-onboard-client

LEAD

Drive client onboarding

Walks a client's 11-step onboarding, sealing collected access credentials into the encrypted vault and tracking which a human has actually verified.

SAY *"onboard a new client" · "record a GBP / CMS login" · "what's outstanding"*

INPUTS

/aios-data-import

WRITES

Import a CSV / XLSX file

Maps an uploaded file's columns onto a client's real fields and commits the rows — keywords, rankings, backlinks, citations or Search Console — reporting rejected rows honestly.

SAY *"import keywords / rankings" · "why were rows rejected"*

INPUTS

/aios-billing

OWNER

MRR, invoices & collections

Reports MRR, the invoice ledger and collected revenue, and drives an invoice through its manual lifecycle — draft, finalize, mark paid, void, refund. No payment gateway.

SAY *"MRR" · "create an invoice" · "what's past due"*

INPUTS

8 Upsells

The add-on catalogue the portal renders

1 command

/aios-upsells

OWNER

Manage the upsell catalogue

Surfaces the agency-global Fiverr upsell gigs the client portal can render — list, create, edit, toggle active and reorder.

SAY *"upsells" · "add-on services" · "add an upsell" · "reorder the offers"*

INPUTS
