

AIOS · STRUCTURAL WORKFLOW & FEATURES

The Whole System, End to End

Every workflow, every feature, one map.

The complete structural flowchart of AIOS — from a client typing a URL to a published, reported result — plus the full feature inventory of all four modules, the human review gates, and the two-tier access model: Free (audit only) and Paid (full access).

**Workflow &
feature map**

01 AT A GLANCE

The platform as one workflow

Everything AIOS does is one loop repeated per client: **measure, create, promote, report — and keep watch**. A person approves the last step of anything client-facing. The access model is simple: **Free covers the audit; Paid unlocks the rest of the loop**.

THE LOOP, TOP LEVEL

Steps 01–04 are the per-client delivery loop; step 05 runs continuously across every client and feeds new checks and guidance back into steps 01–02.

02

MASTER FLOWCHART

The end-to-end client journey

One provisioned client, one full pass through the platform. Diamonds are decisions; green is automated; violet needs a human.

03

ROLES IN THE FLOW

Who does what — swimlanes

The same journey, split by actor. Green tiles run automatically; violet tiles are the human touchpoints; plain tiles are self-serve client actions.

The gate never moves

In both tiers, anything client-facing passes through the **Team review checkpoint** before it reaches a client. The Paid tier removes the manual *doing*, not the human *approving*.

04 FEATURE MAP · 1 OF 2

Audit & Content features

MODULE 01 · AUDIT

URL-ONLY

Technical audit

Crawl, indexing, speed (Core Web Vitals), schema, security headers, SSL.

Actionable audit

Per-page fixes — titles, meta, headings, NAP, internal links.

Local & GBP signals

Map-pack context, categories, NAP from Places / Business Profile.

AI / GEO signals

AI-overview readiness, entities, structured-data coverage.

Backlink & citation audit

Profile strength, toxic links, listing consistency (see Off-page).

20–30+ page PDF

House-styled report + live web version, stored to the client Sheet.

MODULE 02 · CONTENT

MULTI-FRAMEWORK

Framework selector

AIDA · PAS · BAB · FAB · 4 Ps · PASTOR · 4 U's, chosen by type + intent.

Service / blog / local pages

Long-form copy fit to the page's purpose and search intent.

Titles & meta

Built with the 4 U's; bulk generation for whole sections.

Automated schema (JSON-LD)

Generated and validated, wired to the content type.

AI images + alt text

Featured + inline images, geotagged where relevant.

Publish: WordPress / PDF

REST push (body, meta, images, schema) or branded export.

Off-page, Portal & Radar features

MODULE 03 · BACKLINKS, CITATIONS & WEB 2.0

Backlink monitoring
Referring domains, new/lost links, anchors, authority, spam score.

Local citations / NAP
Directory listings, consistency checks, bulk submit & update.

Web 2.0 automation
Branded article → official API publish → live-link verify → track.

Quality gate + diversification
Human approval, varied platforms/anchors — never link spam.

MODULE 04 · PORTAL (ROLE-SCOPED)

CLIENT / TEAM / ADMIN

Dashboard

Reports web+PDF

Milestones

Run audit

My queue

Key vault

Tiers + roles

Cost dial

Fiverr upsells

MODULE 05 · POLICY RADAR

Watch → Detect → Research
official Google sources, diffed

Flag (severity · category · region)
versioned, source-cited KB

Recommend → Command Center
human-confirmed before live

THE CLOSED LOOP

A Radar recommendation can **add an audit check**, **adjust content guidance**, or **raise a client advisory** — so the platform gets smarter every time Google moves, without anyone rebuilding a thing.

06 COST & LIFECYCLE

The two tiers & the build lifecycle

TWO TIERS — WHAT THE CLIENT GETS

FREE — Audit only

The client can run an audit and view the report (web + PDF) — nothing else. \$0 to run, on free Google data + the in-house crawler. This is the lead magnet: prove value on any URL, then convert.

PAID — Full access

Everything: content generation & publishing, backlinks, citations, Web 2.0, milestones, reporting and automation — on paid data, with a human approving each client-facing step.

Free is the way in; Paid is the platform. A per-client budget cap and an automatic daily spend-stop sit under the Paid tier so cost stays controlled.

BUILD LIFECYCLE — PROVABLE EXITS, WEEK BY WEEK

0

Pre-reqs

VPS, keys in vault, Sheets service account, test WordPress site.

1

Foundations + SheetStore

Audit runs URL-only, writes findings to Sheets, returns a PDF.

2

Audit in the portal

Client logs in, runs a URL-only audit, downloads the report.

3

Content module

Framework auto-selected, reviewed, published to WordPress.

4

Off-page + Portal + Radar

Backlinks, citations, Web 2.0, milestones, Command Center live.

5

Hardening + handover

Security, backups, UAT, production — in the agency's name.

THE ONE LINE TO REMEMBER

Measure → create → promote → report, on a dial you control — with a person approving the last step, always.
