

OFF-PAGE AUTOMATION · FULL SITE & COST REFERENCE

Citations & Web 2.0 Every Site, Priced & Verified

A neutral, site-by-site reference for citation directories and Web 2.0 publishing platforms across the US, UK, Canada and Australia — pricing, how to obtain each API, whether it accepts automated posting, and whether a post **actually goes live** (dofollow vs nofollow, moderation). Plus every tooling and API cost. Written to inform, not to promise: anything unconfirmed is marked **Unverified**.

COST CATEGORIES

How to read this document

Every entry states what is known and flags what is not. Nothing here is a commitment to a specific result — it is a factual map of what each platform allows, what it costs, and where the friction is.

Pricing — free vs paid tiers with real numbers where confirmable; **Unverified** where a current figure could not be confirmed.

API for posting — whether an official API can create/publish content, and its status (current / deprecated / none).

How to get the API — the concrete access path and auth method (OAuth2 / app password / token / XML-RPC).

Posts via API — Yes / No / Draft-only / Partner-gated / Deprecated / Unverified.

Publishes a live page — whether an API post produces a public, indexable URL, or only a draft/private page.

Link type — **dofollow** passes ranking signal; **nofollow** generally does not. Many free platforms are nofollow.

Automation (citations) — **API** **Aggregator-fed** **Bot-fillable**
CAPTCHA/verify **Manual only**

Neutral note — honest caveats: moderation, ban risk, ToS limits, nofollow, or uncertainty.

Neutrality & accuracy. Platform pricing, API availability and link policies change often. Figures are 2026 list/observed values from each platform's own docs where reachable, or marked Unverified. Confirm against the live source before committing to a client deliverable. This document deliberately avoids promising volumes, rankings, or "guaranteed dofollow" outcomes.

PART A

Web 2.0 publishing platforms

106 platforms · can we publish an article, via what, at what price, and does it actually go live?

Blogging & publishing platforms

19 ENTRIES

General-purpose blog hosts and long-form article platforms.

WordPress.com <https://wordpress.com>

API post: Yes

dofollow

PRICING

Free (\$0, *.wordpress.com subdomain + WP ads). Paid (billed annually): Personal \$4/mo, Premium \$8/mo, Business \$25/mo, Commerce \$45/mo; higher on monthly billing (\$9/\$18/\$40/\$70).

HOW TO GET THE API

Register an app at developer.wordpress.com/apps for a client ID/secret, run OAuth2 authorization-code flow to get an access token, then POST to `/rest/v1.1/sites/$site/posts/new`. Free/Personal/Premium = 'Public' sites (WordPress.com REST API); Business/Commerce = 'Atomic' sites (also support standard WP REST API + application passwords).

MODERATION

None pre-publish (self-serve); Akismet spam filter on comments; ToS/AUP enforced reactively.

API FOR POSTING

Yes — WordPress.com REST API v1.1 (posts endpoint); Business/Commerce (Atomic) sites also expose the standard WP REST API.

PUBLISHES A LIVE PAGE?

Yes — `status=public` creates a public, indexable page; can also create drafts.

LINK TYPE

dofollow

NEUTRAL NOTE

Free/low-tier sites carry a *.wordpress.com subdomain and ads. Post-body links are treated as standard/dofollow but this is not contractually guaranteed and could change. Sites used purely for spammy SEO content risk suspension under the ToS.

Blogger / Blogspot <https://www.blogger.com>

API post: Yes

dofollow

PRICING

Free (Google product; no paid tier). Custom domain requires buying a domain elsewhere.

HOW TO GET THE API

Create a Google Cloud project, enable 'Blogger API v3', create OAuth 2.0 client credentials, obtain user consent for scope <https://www.googleapis.com/auth/blogger>, then POST to `/blogger/v3/blogs/{blogId}/posts/`.

MODERATION

None pre-publish (self-serve); Blogger content policy + automated spam classifier can unpublish/delete blogs.

API FOR POSTING

Yes — Blogger API v3 (posts.insert).

PUBLISHES A LIVE PAGE?

Yes — `public`, indexable page; can also insert as draft (`isDraft=true`).

LINK TYPE

dofollow

NEUTRAL NOTE

Free but at Google's discretion — blogs auto-flagged as spam can be removed without notice/appeal. Post-body links are dofollow; comment links are nofollow. Default *.blogspot.com subdomain.

Tumblr <https://www.tumblr.com> DA 97 claimed by a third-party SEO blog (unverified)

API post: Yes

mixed

PRICING

Free to post. Optional cosmetics; 'Ad-Free Browsing' ~\$4.99/mo (not required to publish).

HOW TO GET THE API

Register an app at tumblr.com/oauth/apps for an OAuth consumer key/secret. Authenticate via OAuth2 (scopes basic, write, offline_access) or legacy OAuth1, then POST to `/v2/blog/{blog-identifier}/posts`.

MODERATION

None pre-publish; automated spam/abuse filters + community guidelines; aggressive spam-blog takedowns.

API FOR POSTING

Yes — Tumblr API v2 (create post; Neue Post Format).

PUBLISHES A LIVE PAGE?

Yes — `state=published` gives a public page; can also be draft/queue/private.

LINK TYPE

mixed

NEUTRAL NOTE

Owned by Automattic. Outbound-link rel behavior is undocumented and inconsistently reported (often nofollow on *.tumblr.com) — treat SEO link value as unverified. A single SEO vendor's 'dofollow, DA 97' claim is not confirmable.

Ghost (Pro) <https://ghost.org>

API post: Yes

dofollow

PRICING

Self-hosted Ghost software: free (open source, you pay hosting). Ghost(Pro) managed, per-month: Starter ~\$15–18, Publisher ~\$29–35, Business ~\$199–239 (lower figure = annual billing, ~20% off), plus Custom/Enterprise. 0% platform fee on subscriptions (Stripe fees still apply).

HOW TO GET THE API

In Ghost Admin → Settings → Advanced → Integrations → 'Add custom integration' to get an Admin API key (id:secret); sign a short-lived JWT with the secret; POST to /ghost/api/admin/posts/. Custom integrations/Admin API require Publisher tier (\$29/mo) or higher on Ghost(Pro), or self-host for full API access.

MODERATION

None (you own the site; self-publish).

API FOR POSTING

Yes — Ghost Admin API (create post). NOT available on the Starter tier.

PUBLISHES A LIVE PAGE?

Yes — status:"published" gives a public, indexable page; API posts default to DRAFT unless status is set.

LINK TYPE

dofollow

NEUTRAL NOTE

Admin API is gated: the cheapest Starter plan does NOT include custom integrations — you need Publisher (\$29/mo) or a self-hosted install. Posts are created as drafts by default.

Medium <https://medium.com>

API post: Deprecated

nofollow

PRICING

Free to publish. Medium membership \$5/mo or \$50/yr (reader access + monetization) — not required to post.

HOW TO GET THE API

Historically: Settings → Integration tokens (self-issued) or OAuth2 app. As of 2025 Medium will not issue new tokens or approve new integrations; only tokens obtained before 2025 still function — so effectively unavailable to new users.

MODERATION

None pre-publish; curation/distribution review; spam & policy enforcement can remove posts.

API FOR POSTING

Deprecated — the Medium OAuth2 / integration-token API is closed to new integrations as of 1 Jan 2025; no new tokens are issued.

PUBLISHES A LIVE PAGE?

Yes, only with a valid legacy token — POST /v1/users/{id}/posts creates a post (publishStatus public/draft/unlisted); public posts are indexable.

LINK TYPE

nofollow

NEUTRAL NOTE

External links are rel=nofollow (no SEO equity). API is closed to new users since Jan 2025 — do not plan new automation around it. Content sits on a medium.com subpath.

Substack <https://substack.com>

API post: Unverified

dofollow

PRICING

Free to publish (free newsletters have no platform fee). Paid publications: Substack takes 10% + Stripe processing fees.

HOW TO GET THE API

None sanctioned. Unofficial approach: reuse the logged-in session cookie (connect.sid) with third-party wrappers. Not documented or supported by Substack.

MODERATION

None pre-publish; content-policy enforcement is reactive.

API FOR POSTING

No official/public API. Only unofficial reverse-engineered endpoints and community libraries exist.

PUBLISHES A LIVE PAGE?

Yes — published posts are public, indexable pages (yourname.substack.com or custom domain).

LINK TYPE

dofollow

NEUTRAL NOTE

No official API — any automation depends on undocumented internal endpoints that can break without notice and may breach the ToS / trigger account action. Manual publishing produces public, indexable pages.

LiveJournal <https://www.livejournal.com>

API post: Yes

unknown

PRICING

Free (ad-supported). Paid 'Professional' package ~1399₽/yr (~\$18–19) with auto-pay, or ~1799₽ (~\$24) one-time. Prices set in Russian rubles.

HOW TO GET THE API

No app registration/OAuth. Authenticate with account username + password (or challenge-response/MD5) against <https://www.livejournal.com/interface/xmlrpc> and call `postevent`.

MODERATION

None pre-publish; ToS enforcement. Russian-owned (Rambler/SUP Media).

NEUTRAL NOTE

Aging password-based XML-RPC protocol (no OAuth). Russian ownership raises data-jurisdiction/content-policy considerations. Outbound-link SEO value is unverified.

API FOR POSTING

Yes — legacy XML-RPC API (`LJ.XMLRPC.postevent`) and the older flat client protocol.

PUBLISHES A LIVE PAGE?

Yes — `security=public` gives a public entry; can be set `friends-only/private`.

LINK TYPE

unknown

Write.as <https://write.as>

API post: Yes

dofollow

PRICING

Free tier (anonymous posts / limited blog). Pro \$9/mo (\$6/mo billed annually). Team \$30/mo (\$25/mo annually).

HOW TO GET THE API

Anonymous posting needs no auth (store the returned token to edit later). For a blog: authenticate via `POST /api/auth/login` (or generate an access token), then `POST /api/collections/{alias}/posts`.

MODERATION

None pre-publish; spam/abuse enforcement.

NEUTRAL NOTE

Privacy-first and minimalist. Free anonymous posts are public-by-URL but not part of a discoverable/indexed blog; upgrade to Pro for a custom-domain indexable blog. Link rel is standard but not explicitly documented (dofollow unverified).

API FOR POSTING

Yes — Write.as API (same API family as WriteFreely; `POST /api/posts` and `/api/collections/{alias}/posts`).

PUBLISHES A LIVE PAGE?

Yes for a blog post. Note: free/anonymous posts get a random URL and are public-by-link but unlisted; a properly indexable blog (custom domain, listed) generally needs Pro.

LINK TYPE

dofollow

WriteFreely <https://writefreely.org>

API post: Yes

dofollow

PRICING

Free & open-source software — you self-host and pay your own hosting. (Write.as is the paid hosted version of the same engine.)

HOW TO GET THE API

Run your own instance; authenticate via `POST /api/auth/login` for an access token, then `POST` to create a post. Anonymous posting also supported.

MODERATION

Instance-dependent (whoever runs the instance controls moderation).

NEUTRAL NOTE

This is self-hosted software, not a hosted service — 'pricing' is your own hosting cost, and indexability/SEO depend entirely on how the instance is configured. On a fresh single-user instance you control everything.

API FOR POSTING

Yes — WriteFreely API (`POST /api/posts`, `/api/collections/{alias}/posts`).

PUBLISHES A LIVE PAGE?

Depends on the instance — public by default, but indexability, federation and privacy are configurable per install; an admin can make it private/unfederated.

LINK TYPE

dofollow

Telegra.ph <https://telegra.ph>

API post: Yes

nofollow

PRICING

Free. No account or signup required.

HOW TO GET THE API

Call `createAccount` (no signup) at <https://api.telegra.ph> to receive an `access_token`, then call `createPage` with `access_token`, title, and content (array of Node). Fully anonymous.

MODERATION

None pre-publish (anonymous); abuse handled reactively by Telegram.

API FOR POSTING

Yes — Telegraph API (`createPage`).

PUBLISHES A LIVE PAGE?

Yes — public page at telegra.ph/..., but Google indexing of Telegraph pages is inconsistent/unreliable.

LINK TYPE

nofollow

NEUTRAL NOTE

Anonymous, instant, no login — but outbound links are reported nofollow (no SEO equity) and indexing is unreliable. You must retain the `access_token` to edit a page later. Owned by Telegram.

Micro.blog <https://micro.blog>

API post: Yes

dofollow

PRICING

No free tier. Micro.one \$1/mo; Micro.blog \$5/mo (\$50/yr); Premium \$10/mo (\$100/yr); Family \$15/mo; Studio \$20/mo.

HOW TO GET THE API

Generate an app token at micro.blog/account/apps (or use IndieAuth), then send a Micropub POST (form-encoded or JSON) with `Authorization: Bearer <token>` to <https://micro.blog/micropub>.

MODERATION

None pre-publish; community guidelines + spam enforcement (curated, civility-focused community).

API FOR POSTING

Yes — Micropub API (IndieWeb W3C standard) plus a native JSON API.

PUBLISHES A LIVE PAGE?

Yes — public, indexable hosted blog page (custom domain supported).

LINK TYPE

dofollow

NEUTRAL NOTE

Paid-only (from \$1/mo). Because it implements the standard Micropub protocol, many third-party IndieWeb clients work out of the box.

Mataroa <https://mataroa.blog>

API post: Yes

dofollow

PRICING

Free (most features included). Premium \$9/yr (custom domain, monthly auto-exports).

HOW TO GET THE API

Generate an API key in account settings; send `Authorization: Bearer <token>`; POST to `/api/posts/` to create (also `update/delete/list`). No rate limiting.

MODERATION

None pre-publish; solo-operator anti-spam enforcement.

API FOR POSTING

Yes — documented Mataroa API (mataroa.blog/api/docs).

PUBLISHES A LIVE PAGE?

Yes — public, indexable page (subdomain, or custom domain on Premium).

LINK TYPE

dofollow

NEUTRAL NOTE

Tiny independent, low-cost platform (custom domain needs the \$9/yr Premium). Being solo-run/indie, long-term durability is a consideration for anything mission-critical.

Bear Blog <https://bearblog.dev>

API post: No

dofollow

PRICING

Free (*.bearblog.dev subdomain). Premium \$5/mo (or \$49/yr; \$199 lifetime) — custom domain, media uploads, analytics, up to 10 sites.

HOW TO GET THE API

N/A — posting is only via the web editor.

MODERATION

Manual review — every new blog is human-reviewed by the founder before appearing in the discovery feed / being search-indexed; zero-tolerance spam policy (the 'Frustration Loop' deliberately wastes spammers' time).

NEUTRAL NOTE

No API and an explicit anti-SEO-spam stance: link-building/marketing blogs are actively blocked and new blogs are noindex until approved. A poor fit for automated or SEO-oriented posting.

API FOR POSTING

No public API — no documented programmatic publishing endpoint.

PUBLISHES A LIVE PAGE?

Manual only. Pages are public, but NEW blogs are kept non-discoverable / out of search indexing until manually vetted by the founder.

LINK TYPE

dofollow

Svbtile <https://svbtile.com>

API post: Unverified

unknown

PRICING

Paid only — ~\$6/mo (some sources \$7/mo) after a ~1-week free trial. No permanent free tier.

HOW TO GET THE API

N/A — write via the Svbtile editor. Third-party aggregator claims of an 'open API' are unconfirmed against any primary source.

MODERATION

Editorial/curated — Svbtile runs as a curated, magazine-style network.

NEUTRAL NOTE

Paid-only, curated/invite-flavored platform with no verifiable public posting API. Do not assume programmatic publishing is possible without confirming directly.

API FOR POSTING

No confirmable public API (Unverified) — no official developer documentation for programmatic publishing could be found.

PUBLISHES A LIVE PAGE?

Yes — public page on the curated network; manual publishing via the editor.

LINK TYPE

unknown

HubPages <https://hubpages.com>

API post: No

unknown

PRICING

Was free (ad-revenue share via the Earnings Program). Now being wound down.

HOW TO GET THE API

N/A.

MODERATION

Editorial — historically a manual Quality Assessment Process (QAP) reviewed/curated articles.

NEUTRAL NOTE

Platform announced (Nov 2025) it is being wound down after ~20 years. Do NOT rely on it — no new content is accepted and content will be removed.

API FOR POSTING

No public publishing API.

PUBLISHES A LIVE PAGE?

No (shutting down) — as of ~19 Nov 2025 no new accounts, content, or edits are accepted; Earnings end 15 Jan 2026; account access only until ~end of Feb 2026.

LINK TYPE

unknown

Vocal Media <https://vocal.media>

API post: No

nofollow

PRICING

Free to join. Vocal+ \$9.99/mo or \$99/yr (higher per-view rates, lower fees).

HOW TO GET THE API

N/A.

MODERATION

Editorial review — every story passes through moderation/approval before going live.

NEUTRAL NOTE

No API; each post is human-moderated before publishing (approval can take time or be rejected). Outbound links are commonly reported nofollow — treat SEO equity as unverified. Monetization is by views/tips.

API FOR POSTING

No public publishing API — content is authored only through the web editor.

PUBLISHES A LIVE PAGE?

Yes, after review — a published story is a public page once it clears moderation.

LINK TYPE

nofollow

Postach.io <https://postach.io>

API post: Deprecated

unknown

PRICING

Historically free + a paid tier (~\$5/mo); current pricing not reliably confirmable.

HOW TO GET THE API

Connect an Evernote (or Dropbox) notebook, create a note and tag it 'published' to sync it to the blog. Wholly dependent on the Evernote integration.

MODERATION

None (self-publish via Evernote tag).

NEUTRAL NOTE

Appears largely abandoned/defunct: 2025 user reports say new posts won't publish, some users are still being billed, and control reportedly sits with an Estonian entity. Not recommended.

API FOR POSTING

Indirect only — publishing works via the Evernote API (tag an Evernote note 'published'); there is no native REST publishing API.

PUBLISHES A LIVE PAGE?

Unverified — historically public pages, but reliability is now questionable.

LINK TYPE

unknown

TypePad <https://www.typepad.com>

API post: Deprecated

unknown

PRICING

N/A — platform discontinued.

HOW TO GET THE API

N/A.

MODERATION

N/A.

NEUTRAL NOTE

Permanently shut down (30 Sep 2025) with all content deleted. Do not use — included here only to record its discontinued status.

API FOR POSTING

Discontinued — a TypePad/AtomPub API historically existed, but the service is closed.

PUBLISHES A LIVE PAGE?

No — TypePad shut down permanently on 30 Sept 2025; accounts, blogs, and all content were deleted. No new signups had been accepted since 2020.

LINK TYPE

unknown

NewsBreak <https://www.newsbreak.com>

API post: No

unknown

PRICING

Free to join the Contributor/Creator program (US only); monetization by views/engagement, subject to eligibility.

HOW TO GET THE API

N/A for open posting. Publisher path: submit a full-text RSS feed (with images) for auto-ingestion. Contributor path: write in the web CMS. The business API is partner-gated, not open.

MODERATION

Editorial review + content requirements; monetization gated (US location, follower/volume thresholds, community standards, code of conduct).

API FOR POSTING

No open self-serve publishing API for creators. Contributors use the web CMS; Publishers deliver content via full-text RSS feeds. (A separate 'NewsBreak API for business' exists but is a partner/enterprise product, not for authored self-publishing.)

PUBLISHES A LIVE PAGE?

Yes, after eligibility/review — a published article is a public page in the NewsBreak app/site.

LINK TYPE

unknown

NEUTRAL NOTE

US-only. RSS ingestion is not an authored posting API. Strict content rules and restricted outbound links (only editorial-context links; no recirculation link modules). It's an app-first news-distribution channel, not a backlink tool.

Developer, docs & wiki platforms

12 ENTRIES

Technical-audience platforms and collaboratively-edited wikis.

dev.to (Forem) <https://dev.to>

API post: Yes

unknown

PRICING

Free to sign up and publish (no paid tier required to post). Forem is open-source; dev.to hosts it at no cost to writers.

HOW TO GET THE API

Auth = API key in the 'api-key' request header. Get it in-app: Settings > Extensions (a.k.a. 'DEV Community API Keys' / account settings) > generate key. No OAuth needed for personal posting. Body is JSON with article{ title, body_markdown, published (bool), tags, canonical_url, main_image }.

MODERATION

Spam-filter + community/staff moderation; new accounts rate-limited; low-quality/promotional posts and accounts removable after the fact.

API FOR POSTING

Yes — Forem API v1 (also legacy v0). POST <https://dev.to/api/articles> creates an article.

PUBLISHES A LIVE PAGE?

Yes — with published:true the post is a public, indexable page at dev.to/{user}/{slug}. published:false stores a private draft only.

LINK TYPE

unknown

NEUTRAL NOTE

Publishing works reliably via API. Outbound-link rel attribute NOT verified against current live markup (historically reported dofollow in article bodies, but this is Unverified and can change). ToS prohibits spam/SEO-doorway posting; promotional accounts get banned. Treat as a content channel, not a guaranteed dofollow source.

Hashnode <https://hashnode.com>

API post: Yes

unknown

PRICING

Free for personal blogging, including a free *.hashnode.dev subdomain and custom-domain mapping. Paid team/Pro tiers exist but are not required to publish.

HOW TO GET THE API

Auth = Personal Access Token (PAT) sent in the Authorization header as the RAW token (NOT 'Bearer <token>'). Create PAT at hashnode.com/settings/developer. You also need your publicationId. Input fields: title, contentMarkdown, publicationId, tags[[name,slug]], originalArticleURL (canonical), slug.

MODERATION

Spam-filter; a publication/blog must exist first; abusive/spam blogs removable.

API FOR POSTING

Yes — GraphQL Public API at <https://gql.hashnode.com> (POST only). Use the publishPost mutation.

PUBLISHES A LIVE PAGE?

Yes — publishPost produces a public, indexable article on your blog (subdomain or custom domain).

LINK TYPE

unknown

NEUTRAL NOTE

Publishing via API is well-documented and works. dofollow vs nofollow on outbound links is Unverified against current markup (commonly reported dofollow but not confirmed here). Anti-spam ToS applies; mass low-quality posting risks removal.

GitHub Pages <https://pages.github.com>

API post: Yes

dofollow

PRICING

Free for public repositories on all plans (soft limits: ~1 GB site size, ~100 GB/mo bandwidth, ~10 builds/hr). Publishing Pages from PRIVATE repos requires a paid plan (GitHub Pro ~\$4/user/mo, Team ~\$4/user/mo, or Enterprise).

HOW TO GET THE API

Auth = fine-grained/classic Personal Access Token, OAuth token, or GitHub App installation token with 'contents' write and 'pages' write/admin permissions. Requester must be repo admin/maintainer. Then commit files + call the Pages API.

MODERATION

No editorial review. Automated abuse/malware/DMCA and Acceptable Use Policy enforcement; sites can be taken down after the fact.

API FOR POSTING

No single 'publish a post' endpoint. Two-step: (1) push HTML/Markdown files via the Git Contents API (PUT /repos/{owner}/{repo}/contents/{path}, base64 content) or Git Data API; (2) enable the site via the Pages REST API (POST /repos/{owner}/{repo}/pages).

PUBLISHES A LIVE PAGE?

Yes — publishes a public, indexable static site at {user}.github.io/{repo}. Build can take up to ~10 min.

LINK TYPE

dofollow

NEUTRAL NOTE

You author the raw HTML, so outbound links are dofollow by default (no platform-imposed nofollow). But it is static hosting, not a blog CMS — you manage files/commits. Mass doorway/PBN/spam sites violate GitHub's Acceptable Use Policies and get removed; ban risk for automated spam networks.

GitLab Pages <https://docs.gitlab.com/user/project/pages/>

API post: Yes

dofollow

PRICING

GitLab Pages itself is free on all tiers (Free/Premium/Ulimate). Free namespace limits: ~5 users/group, ~400 CI/CD compute minutes/mo, ~10 GiB storage. Paid: Premium ~\$29/user/mo, Ultimate ~\$99/user/mo (verify current on about.gitlab.com/pricing).

HOW TO GET THE API

Auth = Personal Access Token / Project Access Token / OAuth with 'api' or 'write_repository' scope. Steps: create project > commit site files + .gitlab-ci.yml with a 'pages' job > pipeline runs > site deploys.

MODERATION

No editorial review; Acceptable Use Policy + automated abuse enforcement.

API FOR POSTING

No dedicated publish endpoint. Push files via the Repository Files API (POST /projects/{id}/repository/files/{path}) or Commits API, then a CI job defined in .gitlab-ci.yml builds and deploys the 'pages' artifact.

PUBLISHES A LIVE PAGE?

Yes — public, indexable static site at {namespace}.gitlab.io/{project} (public visibility supported on GitLab.com).

LINK TYPE

dofollow

NEUTRAL NOTE

You control the HTML, so links are dofollow. Caveat: deployment REQUIRES a CI pipeline (consumes free CI minutes), and GitLab.com requires account validation (credit-card / identity verification) before shared CI runners work on the Free tier — a real automation gate (verify current requirement). Spam/PBN networks violate the AUP.

Notion (public pages) <https://www.notion.com/help/public-pages-and-web-publishing>

API post: Draft-only

nofollow

PRICING

Free plan can create pages and manually publish a public web page. Search-engine indexing controls, SEO title/description editing, and custom domains require a paid plan (Plus ~\$10/user/mo annual, Business ~\$15–20/user/mo). Indexing can take days-weeks.

HOW TO GET THE API

Auth = internal integration token (or OAuth for public integrations) from notion.so/my-integrations; share the target page/database with the integration. Create content via POST /v1/pages and PATCH /v1/blocks/{id}/children. Making it a PUBLIC web page must be done by hand in the UI (Share > Publish).

MODERATION

No editorial review; automated abuse enforcement.

API FOR POSTING

Partial/No for publishing. The Notion API (integration token) can CREATE page content (blocks) inside a workspace, but there is NO API field/endpoint to toggle 'Publish to web' / make a page public.

PUBLISHES A LIVE PAGE?

No via API — API-created pages are PRIVATE workspace pages. Producing a public, indexable web page requires the manual 'Publish' action in the UI, and indexing needs a paid plan.

LINK TYPE

nofollow

NEUTRAL NOTE

Cannot fully automate: the API builds content but cannot publish it publicly — a manual UI step is mandatory. Public Notion links are reported nofollow (Unverified exact). Pages sit on notion.site/borrowed subdomains and are slow to index. Low SEO link value.

Fandom (Wikia) <https://community.fandom.com>

API post: Yes

nofollow

PRICING

Free (ad-supported).

HOW TO GET THE API

Auth = log in via Special:BotPasswords (generate bot username + password) then action=login + edit tokens, or OAuth where available. Bot credentials work across Fandom/Gamepedia wikis. Bot flag/rights may be required for high-volume edits.

MODERATION

Heavy community moderation: admins, SpamBlacklist + AbuseFilter, edit patrolling. Off-topic/promotional pages are reverted/deleted; accounts blocked.

API FOR POSTING

Yes — MediaWiki Action API (api.php?action=edit) creates/edits wiki pages. Note: the separate Discussions API is unofficial/unsupported and can change without notice.

PUBLISHES A LIVE PAGE?

Yes — creates public, indexable wiki pages.

LINK TYPE

nofollow

NEUTRAL NOTE

CONFIRMED nofollow: MediaWiki defaults \$wgNoFollowLinks=true, so external links carry rel=nofollow. Content must be relevant to the specific wiki's topic — creating promo/link pages is disallowed and quickly reverted, with block/ban risk. Not a viable dofollow link channel.

Wikidot <https://www.wikidot.com>

API post: Yes

unknown

PRICING

Free plan exists (ad-supported). Pro from ~\$4/mo (ProLite/Pro tiers) unlocks full API access and more storage/sites. Add-on slot packs (e.g. 5 slots for ~€59.90/yr) available.

HOW TO GET THE API

Auth = API key(s) via HTTP Basic (username + API key). Pro/ProLite users get two keys (read-only + read-write) at My Account > Settings > API access. FREE users have no keys by default but can REQUEST trial API access on the developer wiki (developer.wikidot.com/i-want-api-access).

MODERATION

Site-owner controlled (you run your own wiki) + platform Acceptable Use / anti-spam.

API FOR POSTING

Yes — legacy XML-RPC API. pages.save_page creates/edits pages; page.get etc. for reads.

PUBLISHES A LIVE PAGE?

Yes — public, indexable pages on *.wikidot.com sites you control.

LINK TYPE

unknown

NEUTRAL NOTE

API access is effectively gated behind a Pro/ProLite subscription (or a manually-approved free trial request). Technology is legacy XML-RPC and the platform is old / lightly maintained. Outbound-link rel (nofollow?) is Unverified. Confirm the platform is still actively serving before relying on it.

Diigo <https://www.diigo.com>

API post: Yes

nofollow

PRICING

Free tier (limited bookmarks/features). Paid Standard/Professional plans exist (historically ~\$40 and ~\$59 per year) — current numbers Unverified.

HOW TO GET THE API

Auth = API key as a query param PLUS HTTP Basic auth (your Diigo username + password, base64). Request an API key at diigo.com/api_keys (issuance/approval and rate limits may be restrictive — Unverified).

MODERATION

Spam-filter; account required; abusive accounts removable.

API FOR POSTING

Yes for BOOKMARKS (not articles). API v2: POST https://secure.diigo.com/api/v2/bookmarks?key=YOUR_KEY creates a bookmark; 'shared=yes' makes it public.

PUBLISHES A LIVE PAGE?

Partial — creates a public bookmark/annotation entry in your Diigo library (a saved link + notes/tags), NOT a standalone article page. Indexability of these bookmark pages is weak/questionable.

LINK TYPE

nofollow

NEUTRAL NOTE

It is social bookmarking, not publishing — you post a LINK, not content, and outbound links are reported nofollow (Unverified exact). Low/negligible SEO link value; ToS prohibits spam. API-key access may be gated/slow to grant.

Stack Exchange <https://api.stackexchange.com>

API post: Partner-gated

nofollow

PRICING

Free.

HOW TO GET THE API

Auth = OAuth 2.0. Register an app on Stack Apps to get client_id/key, then obtain a user access token with the 'write_access' scope. Even then, posting endpoints are gated/limited and daily write quotas + throttles apply.

MODERATION

Very heavy: human moderators + automated spam/quality systems; new/low-reputation accounts are rate-limited and closely watched.

API FOR POSTING

Technically yes but gated — API v2.3 has write methods (write_access scope; e.g. create answer/question, add comment), but write access is heavily restricted, throttled, and not broadly enabled for general apps.

PUBLISHES A LIVE PAGE?

Only if it survives moderation — questions/answers are public/indexable, but new and promotional content is aggressively human- and auto-moderated and frequently removed.

LINK TYPE

nofollow

NEUTRAL NOTE

NOT a viable link-building channel. Write access is gated and throttled; links in posts (especially from low-rep users) are nofollow; self-promotional/spam content is removed and accounts suspended fast. High ban risk for automated posting. ToS prohibits spam/undisclosed promotion.

GitBook <https://gitbook.com>

API post: Yes

unknown

PRICING

Free tier (personal / open-source, includes Git Sync + OpenAPI docs). Premium ~\$65/site/mo + \$12/user, Ultimate ~\$249/site/mo + \$12/user, Enterprise custom (verify current on gitbook.com pricing).

HOW TO GET THE API

Auth = Bearer developer token (Personal Access Token) from your GitBook developer settings. Create/update pages and content, then publish the space/site (or merge a change request) to push changes live.

MODERATION

No editorial review (self-service); Acceptable Use Policy enforcement.

API FOR POSTING

Yes — REST API can create/update spaces, pages and content, import/export, and manage published docs sites and change requests.

PUBLISHES A LIVE PAGE?

Yes when the space is published as a PUBLIC docs site — then pages are public and indexable. Unpublished/private spaces or auth-gated sites are not public.

LINK TYPE

unknown

NEUTRAL NOTE

Built for documentation, not link SEO. Publishing must be enabled per space (public visibility). Outbound-link rel (dofollow/nofollow) is Unverified. Free tier has limits; spammy/off-purpose usage violates the AUP.

Pressbooks <https://pressbooks.org/dev-guides/rest-api/>

API post: Unverified

unknown

PRICING

On Pressbooks.com you can create a webbook free (with Pressbooks branding); paid exports/premium features and PressbooksEDU (institutional, per-network annual/monthly subscription) — exact numbers Unverified. Self-hosting the open-source plugin is also possible.

HOW TO GET THE API

Auth = WordPress application passwords or the OAuth1.0a plugin (e.g. via wp-api-python). NOTE: write/API access is realistic on SELF-HOSTED installs; on the hosted Pressbooks.com/PressbooksEDU networks, application-password/write-API access is admin-controlled and may not be enabled for ordinary users (Unverified).

MODERATION

Network-admin controlled; institutional/OER context.

API FOR POSTING

Yes in principle — Pressbooks is WordPress-multisite-based and exposes the WordPress REST API (GET/POST/PUT/PATCH/DELETE); chapters are a custom post type you can create via POST.

PUBLISHES A LIVE PAGE?

Yes — a book/chapter set to public is a public, indexable webbook page.

LINK TYPE

unknown

NEUTRAL NOTE

Niche (books/OER, not general blogging). REST write API is dependable mainly on self-hosted Pressbooks; on the hosted network it is likely restricted, so 'posts via API' is Unverified there. Links are probably dofollow (WordPress default) but Unverified. Confirm write access on your specific network before relying on it.

Edublogs <https://edublogs.org>

API post: Partner-gated

unknown

PRICING

Free plan (for teachers/students; ~1 GB storage, no ads, limited features). Edublogs Pro (paid, historically ~\$39.95/yr) unlocks premium features. CampusPress = institutional/custom pricing.

HOW TO GET THE API

Auth = WordPress application passwords (or XML-RPC) — ONLY on Pro/CampusPress. Enable in dashboard, generate an application password, then POST to the WordPress REST API (/wp-json/wp/v2/posts). Free tier has no working API path.

MODERATION

Education-focused moderation + spam control; free/new blogs restricted and can be flagged; content expected to be educational.

API FOR POSTING

WordPress-based, but gated by plan. XML-RPC is DISABLED on FREE blogs (anti-splog). Pro blogs can enable XML-RPC and use the REST API via application passwords.

PUBLISHES A LIVE PAGE?

Yes on a Pro blog — published posts are public, indexable pages (if the blog is public).

LINK TYPE

unknown

NEUTRAL NOTE

Free tier CANNOT publish via API (XML-RPC blocked, no application passwords) — you must pay for Pro to automate. Content must be education-related per ToS; off-topic/promotional blogs are removed. Outbound-link rel (dofollow/nofollow) is Unverified. Not a general-purpose link channel.

Social, microblog & decentralised platforms

15 ENTRIES

Short/long-form social surfaces and blockchain/federated networks.

Mastodon <https://docs.joinmastodon.org/methods/statuses/>

API post: Yes

nofollow

PRICING

Free — open-source and federated; joining a public instance costs nothing. Running your own = server cost; managed hosting (e.g. masto.host) from ~€6/mo. No per-post/API fee.

HOW TO GET THE API

OAuth2 bearer token. Easiest: on your instance go to Preferences > Development > New application, grant write:statuses scope, copy the access token. Programmatic: POST /api/v1/apps to register a client, then POST /oauth/token. Send Authorization: Bearer <token>.

MODERATION

Per-instance: no pre-publish approval on most instances, but spam filters and instance-admin moderation apply; admins can suspend accounts/limit federation.

NEUTRAL NOTE

Outbound links carry rel=nofollow (limited direct SEO value). Behaviour varies by instance — each sets its own ToS, indexing default and automation stance; your account/content can be removed or defederated at an admin's discretion. Verify the specific instance's rules before automating.

API FOR POSTING

Yes — official REST API. POST /api/v1/statuses creates a post (status).

PUBLISHES A LIVE PAGE?

Yes — a public post gets a public permalink page. Indexability depends on the instance AND the user's 'opt-out of search engine indexing' profile setting; some instances/users set noindex, so not guaranteed indexable.

LINK TYPE

nofollow

Minds <https://developers.minds.com/> DA ~59–71 per guest-post sellers (unverified; not from Minds)

API post: Unverified

unknown

PRICING

Free to use. Minds+ paid tier exists (exact price Unverified). Minds Pro = \$50/mo or \$480/yr (per Minds help docs). Self-host 'Minds Networks' priced separately.

HOW TO GET THE API

No public developer app-registration / OAuth client portal is documented for third-party posting; the API is consumed by Minds' own first-party clients. Third-party publish access is Unverified.

MODERATION

Community 'jury/appeals moderation, spam filtering and content policy; minimal-censorship positioning but abuse/spam can be actioned.

NEUTRAL NOTE

'Dofollow / DA71' claims originate from link-selling marketplaces, NOT from Minds — treat as unverified. No official third-party posting API is documented; scripted posting may breach ToS and risk account action.

API FOR POSTING

Partial/Unverified — Minds is open-source with a GraphQL/REST backend, but there is NO publicly documented self-serve OAuth app-registration flow for third parties to post on a user's behalf.

PUBLISHES A LIVE PAGE?

Yes for content created in the app — Minds posts and blogs are public pages and are generally indexable.

LINK TYPE

unknown

Plurk <https://www.plurk.com/API>

API post: Yes

unknown

PRICING

Free.

HOW TO GET THE API

OAuth 1.0a. Register an app at plurk.com/PlurkApp to get an App/Consumer key + secret, complete the OAuth 1.0a handshake for a user access token, then call Timeline/plurkAdd.

MODERATION

Account-based anti-spam / spam filtering; no pre-publish editorial review.

NEUTRAL NOTE

Older API (OAuth 1.0a); micro-blog format only. Outbound link rel not verified. Platform is niche and regionally concentrated (notably Taiwan); aggressive automated posting risks spam flagging.

API FOR POSTING

Yes — Plurk API 2.0. /APP/Timeline/plurkAdd publishes a plurk (micro-post).

PUBLISHES A LIVE PAGE?

Yes — a public plurk appears on the user's public timeline/profile and is publicly viewable/indexable. Note: very short micro-posts (character-limited), not long-form articles.

LINK TYPE

unknown

Hive (hive.blog) <https://developers.hive.io/>

API post: Yes

nofollow

PRICING

Free. Account creation is free via faucets/apps (or a small onboarding fee on some services); posting consumes Resource Credits tied to a small stake, but usable free accounts are available.

HOW TO GET THE API

No API key. You need a Hive account and its private POSTING key (WIF); sign a comment operation and broadcast it to any public RPC node. Delegated posting is possible via Hive Keychain or Hivesigner (OAuth-like) so you don't expose the raw key.

MODERATION

No pre-publish moderation (content is written to an immutable blockchain). Front-ends can mute/hide and downvotes suppress visibility, but the on-chain record persists.

NEUTRAL NOTE

Content is immutable — it cannot be truly deleted, only hidden by front-ends. Outbound links are nofollow. Requires safeguarding a private key; the same post appears across all Hive front-ends.

API FOR POSTING

Yes — publishing is a blockchain 'comment' operation broadcast to a Hive RPC node (e.g. api.hive.blog) via hive-js / dhive / beem.

PUBLISHES A LIVE PAGE?

Yes — the post is stored on-chain and rendered as a public, indexable page at hive.blog/@user/permlink (and simultaneously on PeakD and Ecency).

LINK TYPE

nofollow

PeakD <https://peakd.com/>

API post: Yes

nofollow

PRICING

Free.

HOW TO GET THE API

Same as Hive: a Hive account + private posting key, broadcast a comment op via hive-js/dhive; PeakD supports Hive Keychain / Hivesigner for delegated signing.

MODERATION

No pre-publish moderation (blockchain); front-end curation, muting and downvote-suppression only.

NEUTRAL NOTE

Not an independent platform — it is a Hive interface, so 'posting to PeakD' = posting to Hive. Links nofollow; content immutable; requires a Hive posting key.

API FOR POSTING

Yes, but via the shared Hive blockchain — PeakD is a Hive front-end, not a separate network. A Hive 'comment' broadcast surfaces on PeakD. PeakD offers no distinct third-party posting API of its own.

PUBLISHES A LIVE PAGE?

Yes — public, indexable at peakd.com/@user/permlink (same on-chain content also on hive.blog and ecency).

LINK TYPE

nofollow

Ecency <https://ecency.com/>

API post: Yes

nofollow

PRICING

Free. Uses an in-app 'Ecency Points' reward system; points can optionally be spent to promote posts.

HOW TO GET THE API

Hive account + private posting key, or a Hivesigner OAuth token for delegated posting; broadcast the comment op via hive-js/beem or Ecency/Hivesigner.

MODERATION

No pre-publish moderation (blockchain); front-end spam/abuse handling and muting only.

NEUTRAL NOTE

A Hive front-end, not a separate network; identical on-chain content appears across all Hive interfaces. Links nofollow; content immutable; requires a Hive posting key or Hivesigner token.

API FOR POSTING

Yes, via the shared Hive blockchain — Ecency is a Hive front-end. Publishing is a Hive 'comment' broadcast; Ecency also exposes helper API endpoints and supports Hivesigner OAuth.

PUBLISHES A LIVE PAGE?

Yes — public, indexable at ecency.com/@user/permlink (same on-chain content also on hive.blog and peakd).

LINK TYPE

nofollow

Steemit <https://developers.steem.io/>

API post: Yes

nofollow

PRICING

Free.

HOW TO GET THE API

No API key. You need a Steem account and its private POSTING key (WIF) — found in the steemit.com Wallet > Permissions. Call `steem.broadcast.comment(postingWif, ...)` to publish.

MODERATION

No pre-publish moderation (immutable blockchain); downvotes/flags reduce visibility only.

API FOR POSTING

Yes — publishing is a Steem blockchain 'comment' operation broadcast via `steem-js` to a Steem RPC node (e.g. `api.steemit.com`).

PUBLISHES A LIVE PAGE?

Yes — public, indexable page at `steemit.com/@user/permlink`.

LINK TYPE

nofollow

NEUTRAL NOTE

Steem split from Hive in 2020 and Steemit activity/traffic has declined substantially since. Content is immutable; links nofollow; requires a posting key. Note the Steem and Hive chains are separate — a Steemit post does NOT appear on `hive.blog`.

Publish0x <https://www.publish0x.com/> DA DA45 per link-seller listings (unverified; not from Publish0x)

API post: No

nofollow

PRICING

Free (crypto-tipping model; readers and writers earn tokens).

HOW TO GET THE API

N/A. Becoming a publisher requires submitting an author application (reviewed, ~24h) or receiving an invite; there is no developer API/token for posting.

MODERATION

Manual/editorial: author-application gate plus per-article approval. Referral links allowed only in moderation; low-effort or promo-only posts are removed.

API FOR POSTING

No — no public API for programmatically publishing articles.

PUBLISHES A LIVE PAGE?

Yes for approved authors, but NOT immediate — each article is editorially reviewed and must be approved by Publish0x staff before it goes live as a public page.

LINK TYPE

nofollow

NEUTRAL NOTE

No API; human approval both to become an author and for every article. Outbound links nofollow. Excessive referral/self-promo content is removed and can get accounts banned.

Read.cash <https://read.cash/>

API post: No

unknown

PRICING

Free (Bitcoin Cash tipping model).

HOW TO GET THE API

N/A. Publishing is via the website UI only; no developer posting API is documented.

MODERATION

Community moderation plus spam/plagiarism rules; new/low-reputation users are rate-limited.

API FOR POSTING

No — no public/documented API for publishing articles.

PUBLISHES A LIVE PAGE?

Yes — manual publishing produces a public page; new accounts face posting/withdrawal restrictions until established.

LINK TYPE

unknown

NEUTRAL NOTE

No API. The platform has been largely dormant / very low activity since ~2022, so reach is limited. Outbound link rel is unverified. New-account gates apply.

Gab <https://gab.com/>

API post: Unverified

nofollow

PRICING

Free to post. GabPRO paid tier (historically ~\$9.99/mo or ~\$99/yr — current price Unverified).

HOW TO GET THE API

Mastodon-style OAuth2: register an app / obtain an access token via Gab's developer settings, then send Authorization: Bearer <token>. Note app-registration availability on Gab has been inconsistent and may be gated.

MODERATION

Minimal content moderation (free-speech positioning); spam filtering applies.

API FOR POSTING

Yes (nominally) — Gab is a Mastodon fork and exposes a Mastodon-compatible API; POST /api/v1/statuses creates a post.

PUBLISHES A LIVE PAGE?

Public posts get public pages; indexability is inconsistent — Gab has been deindexed/blocked by various search and infrastructure providers at times.

LINK TYPE

nofollow

NEUTRAL NOTE

Significant brand-safety/reputational risk — Gab is widely associated with extremist content and has been deplatformed by multiple providers; a client backlink there can be a liability. API is a Mastodon fork but access/stability is uncertain; link rel (nofollow) inherited from Mastodon but not independently confirmed.

Gravatar <https://docs.gravatar.com/>

API post: No

unknown

PRICING

Free (owned by Automattic/WordPress.com). No paid Gravatar tier.

HOW TO GET THE API

Bearer token: create an application + API key in the Gravatar Developer Dashboard (100 req/hr unauth, 1000/hr authed). OAuth is available for user-authorized profile access. Profile content itself is edited in the Gravatar dashboard, not posted as articles.

MODERATION

Automattic profile/content policy; minimal.

API FOR POSTING

No — Gravatar is a profile/avatar service, not a post-publishing platform. Its REST API mainly READS profiles (and 'links' fields only in authenticated calls); it is not a feed you publish articles to.

PUBLISHES A LIVE PAGE?

One public, indexable profile page (gravatar.com/username) with a bio and a list of links — a single profile, not per-post pages.

LINK TYPE

unknown

NEUTRAL NOTE

Not a blogging surface — you get exactly one profile page, so its link value is a single citation, not scalable posting. API is oriented to reading/managing profiles, not publishing content. Outbound-link rel is unverified.

About.me <https://about.me/>

API post: No

unknown

PRICING

Free (\$0); Standard \$5/mo (\$60/yr); Pro \$7.50/mo (\$90/yr).

HOW TO GET THE API

N/A. Pages are created/edited only through the About.me web UI; no posting API or token is offered.

MODERATION

Account/content policy; minimal.

API FOR POSTING

No — no current public developer API. (A 2012 API/SDK existed but was discontinued years ago.)

PUBLISHES A LIVE PAGE?

One public, indexable splash/profile page (about.me/username) — a single page, not per-post publishing.

LINK TYPE

unknown

NEUTRAL NOTE

A single-page 'bio/splash' profile, not an article platform — one page per user, so limited as a scalable link source. No public API (the old 2012 API is defunct). Outbound-link rel is unverified. Now owned by Cimpres/Vista.

Linktree <https://linktr.ee/marketplace/developer>

API post: Partner-gated

nofollow

PRICING

Free (\$0); Starter \$8/mo (\$6/mo annual); Pro \$15/mo (\$12/mo annual); Premium \$35/mo (\$30/mo annual). Commerce seller fee on digital sales: 12% Free / 9% Starter / 9% Pro / 0% Premium.

HOW TO GET THE API

Apply to the Linktree developer/marketplace program (partner-gated) to get API access; or build a LinkApp with the LinkApp SDK. No open, self-serve public posting API/token.

MODERATION

Content policy with spam/abuse enforcement; pages/accounts can be suspended.

API FOR POSTING

Partial/gated — Linktree runs a developer program (API + LinkApps SDK) to create/edit/delete links, but access is via an expression-of-interest/partner program, not an open self-serve API. Third-party 'Linktree APIs' online are scrapers, not official.

PUBLISHES A LIVE PAGE?

Yes — a public link-in-bio page (linktr.ee/username). It aggregates links; it is not article/blog publishing.

LINK TYPE

nofollow

NEUTRAL NOTE

A link-in-bio aggregator, not a content platform — outbound links are nofollow, so near-zero direct SEO link value. Official API is partner-gated (not open); the Free plan also skims a 12% fee on any digital-product sales.

Quora (Spaces) <https://www.quora.com/>

API post: No

nofollow

PRICING

Free. Quora+ paid subscription exists for reader/creator monetization (price varies / set per creator — Unverified).

HOW TO GET THE API

N/A. No official developer API/token for writing to Quora or Spaces. Unofficial libraries/bots exist but are unsupported and violate Quora's ToS.

MODERATION

Automated + human moderation; aggressive spam/self-promo detection; content can be collapsed or removed.

API FOR POSTING

No — Quora offers no official public API for posting answers, questions or Space content. (Quora's 'Poe' API is a separate AI-model product, unrelated to publishing on Quora.)

PUBLISHES A LIVE PAGE?

Yes when posted manually — Quora answers/Space posts are public and generally well-indexed.

LINK TYPE

nofollow

NEUTRAL NOTE

No official posting API; any automation relies on unofficial tooling that breaches ToS and carries real account-ban/shadowban risk. Outbound links are nofollow. Manual, high-quality participation is the only ToS-compliant route.

Reddit (as publishing surface) <https://www.reddit.com/dev/api/>

API post: Yes

nofollow

PRICING

Free tier: non-commercial use up to 100 queries/min per OAuth client (no dollar cost). Commercial: paid, ~\$0.24 per 1,000 API calls; enterprise ~\$12,000/mo for up to 50M calls, via sales/approval.

HOW TO GET THE API

OAuth2: create an app at reddit.com/prefs/apps (script/web/installed type) to get client_id + secret, obtain a token, send Authorization: Bearer <token>. Must accept the Data API Terms; commercial use needs Reddit approval + a paid agreement.

MODERATION

Layered and strict: per-subreddit rules + AutoModerator + sitewide anti-spam. Many subreddits enforce karma/account-age gates; removals, shadowbans and self-promo bans are common.

API FOR POSTING

Yes — official Data API. Submit a post via POST /api/submit (e.g. PRAW's `subreddit.submit()`).

PUBLISHES A LIVE PAGE?

Yes — posts are public at reddit.com and generally indexable, but this is subreddit-dependent (private/restricted subs aren't public; quarantined content may be de-indexed).

LINK TYPE

nofollow

NEUTRAL NOTE

Outbound links are nofollow. Each subreddit has its own rules, karma/age gates and mod team — automated/self-promo posting is frequently removed and risks shadowban. Commercial API access needs Reddit approval and fees; free tier is non-commercial only.

Website builders (free / freemium)

24 ENTRIES

Drag-and-drop site builders with a free or trial tier.

Wix (free blog) <https://www.wix.com>

API post: Yes

mixed

PRICING

Free plan (Wix ads + username.wixsite.com subdomain, Wix Blog app is free to add). Paid (billed annually): Light \$17/mo, Core \$29/mo, Business \$39/mo, Business Elite \$159/mo; month-to-month is higher (~\$24/\$36/\$46/\$172). Prices vary by region/promo.

HOW TO GET THE API

Two auth paths: (1) Build a Wix app in the Wix Dev Center and use OAuth2 — App ID + App Secret + site instancelid are exchanged for a 4-hour access token sent as a Bearer header; or (2) generate an account-level API key (Wix dashboard > API Keys) for your own sites (API keys are NOT usable inside third-party apps — OAuth only there). Site must have the Wix Blog app installed and the caller needs a Blog writer/editor role. Call Create Draft Post then publish, or Create Post with publish:true.

MODERATION

None editorial — account owner publishes freely; subject to Wix ToS and automated abuse/spam detection

NEUTRAL NOTE

Real, documented publishing API but developer-heavy setup (OAuth app or account key). Free tier = wixsite.com subdomain + Wix ads. Outbound links are followed by default with an optional per-link nofollow toggle. ToS prohibits spammy/abusive automation — bulk link-drop use risks account action.

API FOR POSTING

Yes — Wix Blog REST API (Draft Posts + Posts endpoints); supports create and publish

PUBLISHES A LIVE PAGE?

Yes — publish:true makes a live post. Free Wix sites are indexable (Wix states content is crawlable whether upgraded or not), but they sit on a username.wixsite.com subdomain and carry Wix ads, which are weaker SEO signals than a custom domain.

LINK TYPE

mixed

Weebly <https://www.weebly.com>

API post: No

unknown

PRICING

Free plan (Square ads, weebly.com subdomain, 500MB, 3% platform transaction fee on sales). Paid (approx, annual): Personal \$13/mo, Professional \$16/mo, Performance \$29/mo, Premium \$72/mo.

HOW TO GET THE API

N/A. Since Feb 2020 (after Square's acquisition) Weebly paused new developer accounts and stopped accepting new App Center submissions; there is no self-serve publishing API. Only apps registered before Feb 2020 still run.

MODERATION

None editorial — account-controlled; subject to Square ToS

NEUTRAL NOTE

Do not rely on a Weebly publishing API — the developer platform has been effectively frozen for ~5 years. Any third-party 'Weebly API' listings refer to legacy/e-commerce endpoints, not blog publishing.

API FOR POSTING

No public API — Weebly/Square developer program frozen since Feb 2020

PUBLISHES A LIVE PAGE?

N/A — no publishing API. UI-published pages are public and indexable (custom domain requires a paid plan).

LINK TYPE

unknown

Squarespace <https://www.squarespace.com>

API post: No

unknown

PRICING

No free plan; 14-day free trial only. Paid (annual, US 2025 rename): Basic \$16/mo, Core \$23/mo, Plus \$39/mo, Advanced \$99/mo.

HOW TO GET THE API

N/A for content. Developer API keys (Settings > Advanced > Developer API Keys, paid plans) exist ONLY for Orders, Inventory, Products, Transactions, Contacts, Forms and Webhooks. There is no API to create or publish blog posts or pages.

MODERATION

None editorial — account-controlled

NEUTRAL NOTE

No official programmatic way to publish posts/pages; only commerce APIs. No free tier (trial only), so it is a poor fit for free Web 2.0 publishing.

API FOR POSTING

No — commerce/forms APIs only; no blog or page create/publish endpoint

PUBLISHES A LIVE PAGE?

N/A — no content API. 'Squarespace automation' via Zapier/Make drives the editor UI, not an official publish API.

LINK TYPE

unknown

Site123 <https://www.site123.com>

API post: No

unknown

PRICING

Free plan (username.site123.me subdomain, Site123 branding, small storage/bandwidth). Premium tiers approx \$12.80–\$28.80/mo (varies by region/promo — treat as approximate).

HOW TO GET THE API

N/A. Site123 offers webhooks (it calls its webhooks a 'push API') to send form/event data OUT to other apps. There is no inbound API to create or publish pages/posts.

MODERATION

None editorial — account-controlled

API FOR POSTING

No publishing API — outbound webhooks (push) only

PUBLISHES A LIVE PAGE?

N/A — no publishing API. UI publish yields a public page (free subdomain or custom domain on paid).

LINK TYPE

unknown

NEUTRAL NOTE

The 'API' is webhook egress only; it cannot publish content. Paid pricing shown is approximate and should be re-checked on the pricing page.

Strikingly / Mystrikingly <https://www.strikingly.com>

API post: No

unknown

PRICING

Free-forever plan (unlimited free single-page sites on *.mystrikingly.com with Strikingly branding). Limited \$12/mo, Pro \$20/mo, VIP \$59/mo (approx).

HOW TO GET THE API

N/A — no public content-publishing API. Only form/webhook and third-party (Zapier-style) integrations exist.

MODERATION

None editorial — account-controlled

API FOR POSTING

No public API

PUBLISHES A LIVE PAGE?

N/A — no publishing API. Free sites publish to a *.mystrikingly.com subdomain (public/indexable) with Strikingly branding.

LINK TYPE

unknown

NEUTRAL NOTE

One-page-style builder; free sites carry branding on a mystrikingly.com subdomain. Third-party 'API tracker' listings are generic and do not represent a real publishing API.

Webnode <https://www.webnode.com>

API post: No

unknown

PRICING

Free plan (Webnode subdomain, ads). Paid (approx, varies): Limited ~\$5.50/mo, Mini ~\$10/mo, Standard ~\$16.90/mo, Profi ~\$26.50/mo, Business ~\$34.90/mo.

HOW TO GET THE API

N/A — Webnode does not offer a public API of any kind.

MODERATION

None editorial — account-controlled

API FOR POSTING

No API

PUBLISHES A LIVE PAGE?

N/A — no API. UI publish yields a public page (free subdomain or custom domain on paid).

LINK TYPE

unknown

NEUTRAL NOTE

No developer API. Paid figures are approximate (third-party sourced) and should be confirmed on the pricing page.

Jimdo <https://www.jimdo.com>

API post: No

unknown

PRICING

Free 'Play' plan (jimdosite.com subdomain, Jimdo branding). Paid tiers approx \$9–\$39/mo depending on region and Creator vs Dolphin product line (Unverified exact — varies).

HOW TO GET THE API

N/A — no self-serve API to create/publish pages. Third-party 'API tracker' entries are generic and do not document a publishing endpoint.

MODERATION

None editorial — account-controlled

API FOR POSTING

No public publishing API

PUBLISHES A LIVE PAGE?

N/A — no API. UI publish yields a public page.

LINK TYPE

unknown

NEUTRAL NOTE

No public API for programmatic posting. Paid pricing left approximate/Unverified because Jimdo's tiers differ by product line and region.

Yola <https://www.yola.com>

API post: No

unknown

PRICING

Free plan (limited to ~2 pages, Yola subdomain/branding). Bronze \$6.95/mo (\$4.16/mo annual), Silver \$14.95/mo (\$8.33/mo annual), Gold higher; e-commerce tiers ~\$35–99/mo.

HOW TO GET THE API

N/A — no documented public API for creating/publishing pages.

MODERATION

None editorial — account-controlled

API FOR POSTING

No public API

PUBLISHES A LIVE PAGE?

N/A — no API. Free plan is capped at ~2 pages; UI publish yields a public page.

LINK TYPE

unknown

NEUTRAL NOTE

Free tier is heavily capped (~2 pages), limiting its value for publishing. No API.

Carrrd <https://carrrd.co>

API post: No

unknown

PRICING

Free (up to 3 sites on *.carrrd.co with Carrrd branding). Pro Lite \$9/year, Pro Standard \$19/year, Pro Plus \$49/year (annual billing).

HOW TO GET THE API

N/A. Carrrd's 'API' features let a Pro site's FORM send data to / call external APIs; there is no API to create or publish Carrrd sites/pages programmatically.

MODERATION

None editorial — account-controlled

API FOR POSTING

No site-publishing API

PUBLISHES A LIVE PAGE?

N/A — no publishing API. Single-page sites; UI publish yields a public page on *.carrrd.co (free) or a custom domain (Pro).

LINK TYPE

unknown

NEUTRAL NOTE

One-page sites only. The 'API' is outbound form integration, not a publishing API — unsuitable for automated page creation.

Zoho Sites <https://www.zoho.com/sites/>

API post: No

unknown

PRICING

Free plan available. Paid approx \$6–8/mo (single paid tier region-dependent) — treat as approximate/Unverified.

HOW TO GET THE API

N/A. Other Zoho products (Creator, CRM, Commerce) have full REST APIs, but Zoho Sites specifically has no public API to create/publish pages.

MODERATION

None editorial — account-controlled

API FOR POSTING

No API — requested by users but not implemented (confirmed on Zoho community)

PUBLISHES A LIVE PAGE?

N/A — no API. UI publish yields a public page.

LINK TYPE

unknown

NEUTRAL NOTE

Despite Zoho's broad API ecosystem, Zoho Sites has no publishing API. Do not confuse Zoho Creator/CRM APIs with Zoho Sites.

Webs.com <https://www.webs.com>

API post: Deprecated

unknown

PRICING

N/A — service discontinued.

HOW TO GET THE API

N/A — platform shut down.

MODERATION

n/a

API FOR POSTING

Deprecated / defunct

PUBLISHES A LIVE PAGE?

No — Webs.com was shut down by Vistaprint on August 31, 2023; free subdomains were terminated and remaining domains migrated to ExactHosting.

LINK TYPE

unknown

NEUTRAL NOTE

Webs.com no longer exists as a site builder. Do not include it in any live link-building plan.

SimpleSite <https://www.simplesite.com>

API post: No

unknown

PRICING

Free Basic plan (up to 15 pages, SimpleSite ads + subdomain, up to 5 store products). Pro ~\$15.49/mo, E-commerce ~\$30.49/mo.

HOW TO GET THE API

N/A — no public API documented.

MODERATION

None editorial — account-controlled

NEUTRAL NOTE

No developer API. Free tier carries ads and a SimpleSite subdomain.

API FOR POSTING

No API

PUBLISHES A LIVE PAGE?

N/A — no API. UI publish yields a public page (free subdomain with ads/branding).

LINK TYPE

unknown

Bravenet <https://www.bravenet.com>

API post: No

unknown

PRICING

Free blog + free tools. SiteBlocks site builder: can build free but must upgrade to a paid plan to publish live. Hosting/paid plans vary (Unverified exact).

HOW TO GET THE API

N/A — no public content-publishing API documented.

MODERATION

None editorial — account-controlled

NEUTRAL NOTE

Legacy free-tools provider. Free blog can publish; the drag-and-drop site builder gates live publishing behind a paid plan. No API.

API FOR POSTING

No documented publishing API

PUBLISHES A LIVE PAGE?

Mixed: the free Bravenet blog can publish public posts, but free SiteBlocks websites must upgrade to a paid plan before they can be published live.

LINK TYPE

unknown

Google Sites <https://sites.google.com>

API post: Deprecated

unknown

PRICING

Free with any Google account; also bundled in Google Workspace.

HOW TO GET THE API

N/A for the current product. The classic Google Sites Data API (Java/Python/HTTP-XML, OAuth) is deprecated, 'may stop working at any time,' and only reaches CLASSIC Sites — it cannot access the rebuilt Sites launched Nov 22, 2016. There is no public API for new Google Sites.

MODERATION

None editorial — governed by Google account ToS / automated abuse systems

NEUTRAL NOTE

No usable API for the current Google Sites; the classic API is deprecated and unreliable. Free, but SEO value of Google Sites subdomain pages is limited.

API FOR POSTING

Deprecated — the only API (classic Sites Data API) is deprecated; no API for the current/new Google Sites

PUBLISHES A LIVE PAGE?

New Sites: no API (UI publish yields a public page, but Google Sites pages are typically weakly indexed). Classic Sites API is deprecated.

LINK TYPE

unknown

Webflow <https://webflow.com>

API post: Yes

mixed

PRICING

Free Starter plan (yoursite.webflow.io subdomain, limited CMS ~50 items). Site plans (annual): Basic \$14/mo, CMS \$23/mo, Business \$39/mo. A custom domain requires a paid Site plan.

HOW TO GET THE API

Generate a Site API token (Site settings > Apps & integrations > API access) or build an OAuth app. Scopes needed: cms:read, cms:write, and sites:publish. Create a collection item (creates a staged/draft item) via POST /v2/collections/:id/items, then call the Publish Item endpoint (or publish the site). Rate limit ~60-120 req/min by plan.

MODERATION

None editorial — account-controlled

API FOR POSTING

Yes — Webflow Data API v2 (CMS collection items) with create + publish

PUBLISHES A LIVE PAGE?

Yes — after Publish Item the content is live. On the free Starter plan it publishes to yoursite.webflow.io (indexable by default unless you toggle noindex). A custom domain requires a paid Site plan.

LINK TYPE

mixed

NEUTRAL NOTE

Requires designing a CMS Collection structure first — the API only creates items within an existing schema, not arbitrary pages. Free plan is capped (~50 CMS items, webflow.io subdomain). Some API/hosting features effectively need a paid Site plan — verify token access on free Starter before relying on it.

Tilda <https://tilda.cc>

API post: No

unknown

PRICING

Free plan (1 site, up to 50 pages, Tilda subdomain, limited blocks/features). Personal ~\$15/mo (1 site), Business ~\$25/mo (5 sites + API). Approx/annual — verify on pricing page. The API is Business-plan only.

HOW TO GET THE API

Keys come from Site Settings > Export > API Integration (Public Key + Secret Key), available on the Business plan only. But the API endpoints only LIST/GET/EXPORT already-existing pages and project data (getprojectslist, getpageslist, getpage, getpageexport, etc.) — there is no create-page or publish endpoint.

MODERATION

None editorial — account-controlled

API FOR POSTING

No — Tilda's API is READ/EXPORT only; it cannot create or publish pages

PUBLISHES A LIVE PAGE?

No — the API only exports content from pages you already built and published inside Tilda's editor. You must create and publish in the UI first; the API then retrieves that HTML for use on external servers.

LINK TYPE

unknown

NEUTRAL NOTE

Common misconception: Tilda's API is an export/integration tool, NOT a publishing API. Exported pages must display a 'Made on Tilda' link back to tilda.cc per its ToS. API requires the Business plan.

Ucraft <https://www.ucraft.com>

API post: Partner-gated

unknown

PRICING

Free landing-page builder (Ucraft branding/subdomain). Website \$12/mo, eCommerce Starter \$18/mo, eCommerce Growth \$41/mo; Agency/white-label ~\$599/mo (annual pricing).

HOW TO GET THE API

N/A for self-serve. API/core access ('extend, override or integrate') is offered only within Enterprise / white-label packages, arranged with Ucraft's team. No documented public content-publishing API.

MODERATION

None editorial — account-controlled

API FOR POSTING

No public self-serve publishing API — integration/enterprise only

PUBLISHES A LIVE PAGE?

N/A via public API. UI publish yields a public page (free subdomain or custom domain on paid).

LINK TYPE

unknown

NEUTRAL NOTE

Any API/core extension is enterprise/white-label only — not a public API an individual can call to publish posts.

Mozello <https://www.mozello.com>

API post: No

unknown

PRICING

Free plan (Mozello subdomain). Premium \$9/mo (free custom domain 1st year, 50GB, up to 15 store products), Premium Plus \$19/mo (unlimited).

HOW TO GET THE API

API key is generated in the control panel (Store > Store settings > API) and sent in an HTTP header. But Mozello's Store API, Payment API and Apps API cover products, orders and payments ONLY — there is no endpoint to create or publish website pages or blog posts.

MODERATION

None editorial — account-controlled

API FOR POSTING

No content-publishing API — its APIs are e-commerce only

PUBLISHES A LIVE PAGE?

N/A for content — no page/blog API. UI publish yields a public page.

LINK TYPE

unknown

NEUTRAL NOTE

Mozello does have real APIs, but strictly for e-commerce (store/payment/apps). It cannot publish content pages via API.

Weblium <https://weblium.com>

API post: Partner-gated

unknown

PRICING

Free version + 14-day Pro trial. Pro \$15/mo. White-label/agency tiers (Basic/Growth/Enterprise) with 20–50% Pro discounts.

HOW TO GET THE API

N/A for self-serve. Weblium offers a white-label 'embed the builder into your platform' API-based integration for partners/agencies. There is no documented public API for an individual to publish content to a Weblium site.

MODERATION

None editorial — account-controlled

API FOR POSTING

No public publishing API — white-label/partner embed integration only

PUBLISHES A LIVE PAGE?

N/A via public API. UI publish yields a public page.

LINK TYPE

unknown

NEUTRAL NOTE

'API' here means partner white-label embedding of the builder, not a public content-publishing API.

uCoz <https://www.ucoz.com>

API post: Unverified

unknown

PRICING

Free plan (uCoz subdomain + ads). Paid approx: Shop ~\$9.99/mo, Maximal ~\$15.99/mo (plus lower Optimal tier); varies.

HOW TO GET THE API

Enable API access in the site control panel; authenticate with a uCoz uID/OAuth token (see api.ucoz.net 'Getting started'). Documented modules cover pages, blog posts, news, articles, store, users and templates. NOTE: exact auth flow and whether the free plan permits API writes were not fully confirmable from the public docs.

MODERATION

None editorial — account-controlled

API FOR POSTING

Yes (documented) — uCoz API documents get/add/edit/delete for site pages, blog posts, news and articles

PUBLISHES A LIVE PAGE?

Likely yes — the documented add-page/add-post methods create content on the live site; free sites carry uCoz ads and a uCoz subdomain. Not confirmed end-to-end.

LINK TYPE

unknown

NEUTRAL NOTE

Older platform with a genuinely broad documented API, but the exact authentication method and free-plan write availability could not be verified — test end-to-end before relying on it for publishing.

WebStarts <https://www.webstarts.com>

API post: No

unknown

PRICING

Free plan (username.webstarts.com subdomain, unlimited pages, 1GB storage/bandwidth). Pro Plus \$20/mo, Business \$46/mo.

HOW TO GET THE API

N/A — no public/publishing API documented.

MODERATION

None editorial — account-controlled

NEUTRAL NOTE

No developer/publishing API. Free tier is generous on pages but sits on a webstarts.com subdomain.

API FOR POSTING

No API documented

PUBLISHES A LIVE PAGE?

N/A — no API. UI publish yields a public page on a free subdomain (custom domain on paid).

LINK TYPE

unknown

Doodlekit <https://www.doodlekit.com>

API post: No

unknown

PRICING

Free-forever plan (hosting, templates, blog, storage). Paid tiers up to ~\$49/mo (starting ~\$10/mo).

HOW TO GET THE API

N/A — Doodlekit does not provide an API.

MODERATION

None editorial — account-controlled

NEUTRAL NOTE

Small/legacy builder that explicitly offers no API. Suitable only for manual posting.

API FOR POSTING

No API — vendor explicitly provides none

PUBLISHES A LIVE PAGE?

N/A — no API. UI publish yields a public page.

LINK TYPE

unknown

Jigsy <https://jigsy.com>

API post: No

unknown

PRICING

Free plan (1 site, 5 pages, 25MB storage, Jigsy ads, no custom domain). Paid from ~\$3.99/mo (e.g. 10 pages, custom domain, no ads); higher tiers add storage. Approx.

HOW TO GET THE API

N/A — no public API documented.

MODERATION

None editorial — account-controlled

NEUTRAL NOTE

Very limited free tier (5 pages, ads, no custom domain) and no API.

API FOR POSTING

No API documented

PUBLISHES A LIVE PAGE?

N/A — no API. Free tier is capped at 5 pages with Jigsy ads; UI publish yields a public page.

LINK TYPE

unknown

GoDaddy Website Builder (Websites + Marketing) <https://www.godaddy.com/websites/website-builder>

API post: Partner-gated

unknown

PRICING

Free trial / limited free build. Websites + Marketing paid plans approx: Basic ~\$10.99/mo, Premium ~\$16.99/mo, Commerce ~\$20.99/mo (monthly, promo/region-dependent — treat as approximate).

HOW TO GET THE API

N/A for individuals. GoDaddy's Website Builder API is a B2B reseller program for third-party PLATFORMS to embed/build sites (AI content, product descriptions, social scheduling); it requires a partner agreement. GoDaddy's open Developer Platform (developer.godaddy.com) currently exposes Domains APIs — not self-serve blog/page publishing.

MODERATION

None editorial — account-controlled

NEUTRAL NOTE

No public endpoint for an individual to publish a blog post via API; the Website Builder API is reseller/partner only, and GoDaddy's public dev APIs are for domains. Pricing shown is promo-dependent and approximate.

API FOR POSTING

Partner-gated — the Website Builder API (announced Oct/Nov 2024) is a reseller/third-party integration, not a public self-serve API

PUBLISHES A LIVE PAGE?

Via the partner API, sites/content can be created and published — but this is not available to an individual user self-serve. In the normal UI, blog posts publish to a public page (custom domain on paid).

LINK TYPE

unknown

International & regional blog platforms

20 ENTRIES

Large non-English blog hosts (JP/KR/FR/RU/EU and others).

Hatena Bloghttps://hatenablog.com API post: Yesunknown	
PRICING Free (ad-supported, hatenablog.com subdomain). Hatena Blog Pro (tax incl.): 1-month ¥1,008; 1-year ¥8,434 (~¥703/mo); 2-year ¥14,400 (~¥600/mo) — paid up front, auto-renews. Pro removes ads + allows custom domain. HOW TO GET THE API Auth options: OAuth, WSSE, or HTTP Basic. Log in → Blog settings → Advanced (詳細設定) → 'AtomPub' section shows the root/collection endpoint and your API key. Basic/WSSE use Hatena ID + that API key. POST an Atom XML entry to https://blog.hatena.ne.jp/{hatenaID}/{blogID}/atom/entry. MODERATION No pre-publish review; automated spam-filter + ToS enforcement. Commercial/spam auto-posting can be suspended under guidelines. NEUTRAL NOTE Official, documented, actively maintained API (scheduled-post support added Feb 2026). Free tier shows Hatena ads on a subdomain. Aggressive bulk/affiliate auto-posting risks account suspension. dofollow/nofollow on outbound links not verified this session.	API FOR POSTING Yes — official Hatena Blog AtomPub API (RFC 5023 / Atom Publishing Protocol) PUBLISHES A LIVE PAGE? Yes — POST with <app:draft>no</app:draft> creates a public, indexable page; API also supports draft (draft=yes) and scheduled posts (hatenablog:scheduled). LINK TYPE unknown
FC2 Bloghttps://blog.fc2.com API post: Yesunknown	
PRICING Free (ad-supported). Optional paid ad-removal / upgrade plan exists (exact price Unverified). HOW TO GET THE API No OAuth/token. Enable the XML-RPC/API option in blog settings (環境設定). Auth = FC2 account email + password. Endpoint historically http://blog.fc2.com/xmlrpc.php; call metaWeblog.newPost with blog_id="", username=email, password, and publish=1 for public (0 for draft). MODERATION No pre-publish review; automated spam-filter + ToS enforcement; inactive/abusive blogs can be deleted. NEUTRAL NOTE XML-RPC must be explicitly enabled in settings; multiple users report intermittent/failed XML-RPC posting, so test before relying. Free blogs carry FC2 ads. Verify current endpoint. Outbound link rel attribute not verified.	API FOR POSTING Yes — XML-RPC (MetaWeblog / Movable Type compatible) PUBLISHES A LIVE PAGE? Yes — publish=1 creates a public page; publish=0 keeps it as a draft. LINK TYPE unknown
Livedoor Bloghttps://livedoor.blog API post: Yesunknown	
PRICING Free (ad-supported; all core features free). No current paid tier confirmed (legacy premium discontinued — Unverified). HOW TO GET THE API HTTP Basic auth. Log in → Blog settings → API section → issue/copy the AtomPub password (API key). Username = livedoor ID, password = AtomPub key. POST Atom XML to https://livedoor.blogcms.jp/atompub/{blogname}/article (separate current and legacy AtomPub endpoints exist). MODERATION No pre-publish review; automated spam-filter + ToS enforcement; ToS-violating/spam blogs can be removed. NEUTRAL NOTE Official documented AtomPub (LINE/LY-operated). Free plan shows ads on free blogs. Confirm you are using the current (not legacy) AtomPub endpoint. Outbound link rel not verified.	API FOR POSTING Yes — official AtomPub API (RFC 5023) PUBLISHES A LIVE PAGE? Yes — <app:draft>no</app:draft> publishes a public, indexable page; draft=yes keeps it private. LINK TYPE unknown

Seesaa Blog <https://blog.seesaa.jp>

API post: Yes

unknown

PRICING

Free (ad-supported; multiple blogs per account).

HOW TO GET THE API

Enable XML-RPC in blog settings. Auth = Seesaa account email + password. Endpoint <http://blog.seesaa.jp/rpc> (note: no trailing slash) or <https://ssl.seesaa.jp/blog/rpc>. Call `metaWeblog.newPost`; publish flag controls public vs draft.

MODERATION

No pre-publish review; automated spam-filter. Long a target of SEO spam, so anti-spam enforcement / deletions occur.

API FOR POSTING

Yes — XML-RPC (Blogger / MetaWeblog / Movable Type compatible)

PUBLISHES A LIVE PAGE?

Yes — published posts are public and indexable.

LINK TYPE

unknown

NEUTRAL NOTE

Free ad-supported Japanese platform. Endpoint trailing-slash behavior has changed historically — test connectivity. Bulk SEO auto-posting risks deletion. Outbound link rel not verified.

Ameblo (Ameba Blog) <https://ameblo.jp>

API post: No

unknown

PRICING

Free (ad-supported). Ameba Premium (~¥1,027/mo) exists for other perks but is not required to blog; no blog-posting API is sold (Unverified on premium blog specifics).

HOW TO GET THE API

N/A — no official posting API. Only unofficial scraping/browser-automation, which is not sanctioned.

MODERATION

No pre-publish review, but active spam-filter + manual enforcement; Ameba removes commercial/affiliate/SEO auto-posted blogs (affiliate rules eased 2019 but still restrictive).

API FOR POSTING

No public posting API. The old external API was discontinued (spec change Oct 2014); CyberAgent offers no official publish API.

PUBLISHES A LIVE PAGE?

N/A via API. Manual dashboard posts are public/indexable; there is no supported API path to produce them.

LINK TYPE

unknown

NEUTRAL NOTE

Risk: automating posts via unofficial API/Selenium violates ToS and risks account ban; Ameba aggressively deletes spam/commercial auto-posted blogs. External links commonly reported as nofollow / redirect-wrapped (Unverified). Not recommended for automated publishing.

note.com <https://note.com>

API post: No

unknown

PRICING

Free. note Premium ~¥500/month; note Pro (organizations) higher tier. Paid membership/paid-article monetization built in. (Exact non-Premium tiers Unverified.)

HOW TO GET THE API

N/A — no developer program, no OAuth, no documented posting API. Unofficial endpoints use session cookies and change without notice.

MODERATION

No pre-publish review; automated spam-filter. ToS restricts automated access/scraping and server-load-generating automation.

API FOR POSTING

No official/public API. Only unofficial, reverse-engineered internal endpoints (e.g. api.note.com/v2...); note states it publishes no official API and has no announced plans.

PUBLISHES A LIVE PAGE?

N/A officially. (Unofficial calls could create a public page but are unsupported and unstable.)

LINK TYPE

unknown

NEUTRAL NOTE

Risk: no official API; unofficial endpoints break without warning and automated posting/scraping can breach ToS → account suspension. Avoid for brand/business accounts. Any 'note API with Bearer token to publish' claims circulating online are unofficial, not vendor-sanctioned.

Naver Blog <https://blog.naver.com>

API post: Deprecated

unknown

PRICING
Free.

HOW TO GET THE API

Historically: register an app at developers.naver.com, OAuth2 via Naver Login, POST to `/blog/writePost.json` with a bearer token. Now N/A for posting (only non-posting APIs like category listing remained).

MODERATION

Strong automated spam-filter; the API was killed specifically because of ad/spam abuse.

NEUTRAL NOTE

Write API terminated May 2020 — do not plan on API publishing to Naver Blog. Also note Naver content sits largely in Naver's walled-garden search and is weakly indexed by Google; outbound links commonly reported nofollow (Unverified). Manual posting only.

API FOR POSTING

Deprecated — the Naver 'writePost' (블로그 글쓰기) Open API was discontinued in May 2020 (announced Apr 2020) to curb bulk ad/spam blogs. The endpoint may still appear in legacy docs but no longer accepts new posts.

PUBLISHES A LIVE PAGE?

N/A — API posting removed. Posts already published via the old API were retained; new API posting is not possible. Manual posting still produces public pages.

LINK TYPE

unknown

Goo Blog <https://blog.goo.ne.jp>

API post: Deprecated

unknown

PRICING

Was Free + 'goo blog アドバンス' paid plan. Now N/A — service ended.

HOW TO GET THE API

N/A — service shut down.

MODERATION

N/A (closed).

NEUTRAL NOTE

goo blog permanently closed 18 November 2025 after 21 years; the wider goo portal also wound down late 2025. Do NOT use — the platform no longer exists. Users were told to export/migrate before shutdown.

API FOR POSTING

Deprecated — entire platform permanently closed. Historically had XML-RPC posting.

PUBLISHES A LIVE PAGE?

No — new posting ended Oct 2025; service closed 18 Nov 2025 (NTT Docomo); content no longer hosted.

LINK TYPE

unknown

JUGEM <https://jugem.jp>

API post: Yes

unknown

PRICING

Free (ad-supported). JUGEM PLUS paid upgrade exists (exact price Unverified).

HOW TO GET THE API

Auth via your JUGEM account / JugemKey. Endpoint `http://{jugemkey}.jugem.jp/admin/xmlrpc.php` with `blog_id 0`. Documented limits: 1,000 API queries/day and image upload ≤100KB. Use `metaWeblog.newPost`.

MODERATION

No pre-publish review; automated spam-filter.

NEUTRAL NOTE

Official XML-RPC posting with a hard 1,000-queries/day cap and 100KB image limit — plan bulk jobs around these. Free plan is ad-supported. Outbound link rel not verified.

API FOR POSTING

Yes — XML-RPC posting API (MetaWeblog / Movable Type compatible)

PUBLISHES A LIVE PAGE?

Yes — posts are public and indexable.

LINK TYPE

unknown

Over-blog <https://www.over-blog.com>

API post: No unknown

PRICING

Free; premium/paid plans exist (numbers Unverified).

HOW TO GET THE API

N/A for publishing. The developer center/SDK is for login and social widgets, not creating posts.

MODERATION

Editorial/spam-filter (Webedia-owned platform).

NEUTRAL NOTE

Owned by Webedia. No sanctioned way to auto-publish articles via API. Do not confuse the 'OverBlog Login/Social' developer tools with content publishing. Manual/dashboard posting only.

API FOR POSTING

No public article-publishing API. developers.over-blog.com offers only 'OverBlog Login' (social login) + social plugins + a PHP SDK for those; users on Over-blog's own forum confirm no posting API.

PUBLISHES A LIVE PAGE?

N/A — no API path to create posts; publishing is via the dashboard only.

LINK TYPE

unknown

Skyrock / Skyblog <https://www.skyrock.com>

API post: Deprecated unknown

PRICING

Was Free. Now N/A — blog service closed.

HOW TO GET THE API

N/A — Skyblog closed.

MODERATION

N/A (closed).

NEUTRAL NOTE

Skyblog permanently closed 21 August 2023 (personal-data / GDPR compliance); ~12.6M blogs archived by France's BNF. Do NOT use — no live blogs, no publishing.

API FOR POSTING

Deprecated — blog platform permanently shut down. (Skyrock previously exposed a developer API, now defunct.)

PUBLISHES A LIVE PAGE?

No — Skyblog ceased operations 21 Aug 2023; blogs taken offline (archived by BNF/INA).

LINK TYPE

unknown

Eklablog <https://www.eklablog.com>

API post: Unverified unknown

PRICING

Free (ad-supported). Paid options Unverified.

HOW TO GET THE API

Likely: enable XML-RPC in blog settings and connect a MetaWeblog-compatible client with account credentials — specifics not officially documented (Unverified).

MODERATION

Editorial/spam-filter (Webedia-owned platform).

NEUTRAL NOTE

French platform (Webedia). XML-RPC is mentioned in third-party feature summaries but there is no official developer/API documentation — verify hands-on before relying on API publishing.

API FOR POSTING

Referenced XML-RPC support in feature lists, but no official developer documentation confirming a publish API.

PUBLISHES A LIVE PAGE?

Unverified — if XML-RPC works, posts would be public; not confirmed.

LINK TYPE

unknown

Canalblog <https://www.canalblog.com>

API post: Yes unknown

PRICING

Free (ad-supported). Paid options Unverified.

HOW TO GET THE API

Email posting: get the blog's secret publish address + PIN from settings (format BlogID.PIN@canalblog.net) and email your post. Remote clients: configure the MetaWeblog XML-RPC endpoint with your Canalblog credentials.

MODERATION

Editorial/spam-filter (Webedia-owned platform).

NEUTRAL NOTE

Owned by Webedia. Publishing relies on legacy MetaWeblog XML-RPC clients + email-to-blog rather than a modern documented API — confirm the endpoint/email posting is still active on the current Canalblog before relying. Outbound link rel not verified.

API FOR POSTING

Yes (legacy) — remote posting via email-to-blog and MetaWeblog / XML-RPC-compatible desktop clients (Windows Live Writer, ScribeFire, BlogJet). No modern documented REST API.

PUBLISHES A LIVE PAGE?

Yes — email/MetaWeblog posts publish as public pages.

LINK TYPE

unknown

LiveInternet <https://www.liveinternet.ru>

API post: Yes

unknown

PRICING

Free.

HOW TO GET THE API

Auth = LiveInternet username + password. Configure a MetaWeblog/MT client with host www.liveinternet.ru and path /interface/mt/. Compatible clients include ScribeFire; LJ-protocol clients (e.g. Semagic) also work.

MODERATION

No pre-publish review; automated spam-filter.

API FOR POSTING

Yes — MetaWeblog API (XML-RPC); also LiveJournal Flat API and Movable Type/Blogger-compatible clients.

PUBLISHES A LIVE PAGE?

Yes — posts are public (within the Russian-language LiveInternet community).

LINK TYPE

unknown

NEUTRAL NOTE

Russian diary/blog platform; official API docs are sparse and user-reported. Consider jurisdiction/sanctions and Russian-language audience before use for a client. Verify current API availability. Outbound link rel not verified.

Rediff MyPage / Rediff Blogs <https://mypage.rediff.com>

API post: Unverified

unknown

PRICING

Free.

HOW TO GET THE API

N/A / Unverified — no developer program or posting API found.

MODERATION

Unverified.

API FOR POSTING

No documented public posting API (Unverified).

PUBLISHES A LIVE PAGE?

Unverified — Rediff Blogs historically produced public pages; current status of the blog product is unclear after the 2024 ownership change (Infibeam Avenues acquired majority stake).

LINK TYPE

unknown

NEUTRAL NOTE

Indian portal; the blog/MyPage product appears lightly maintained with no documented API and uncertain status after 2024 ownership change. Confirm the blog service still accepts new posts before relying on it at all.

Dreamwidth <https://www.dreamwidth.org>

API post: Yes

unknown

PRICING

Free accounts can post fully. Paid: \$3/1mo, \$6/2mo, \$17.50/6mo, \$35/12mo. Premium Paid: \$25/6mo, \$50/12mo (purchased via Dreamwidth Points, \$1 = 10 points).

HOW TO GET THE API

No app registration. Auth = Dreamwidth username + password (challenge/response, or clear over HTTPS). Endpoints: <https://www.dreamwidth.org/interface/xmlrpc> (use LJ.XMLRPC.postevent) and <https://www.dreamwidth.org/interface/blogger>. Works with existing LiveJournal-era clients.

MODERATION

No pre-publish review; ToS-based moderation + spam handling.

API FOR POSTING

Yes — XML-RPC (LiveJournal-compatible) and a Blogger API endpoint.

PUBLISHES A LIVE PAGE?

Yes — set entry security to 'public' to get a public, indexable page (can also post access-locked/private).

LINK TYPE

unknown

NEUTRAL NOTE

Open-source, LiveJournal-derived. Stable but old XML-RPC; remember to set security=public or the page won't be indexable. It's a personal-journal/fandom community, not a marketing platform — overt SEO/commercial posting fits poorly. Outbound link rel not verified.

Blog.hr <https://blog.hr>

API post: Deprecated

unknown

PRICING

Was Free. Now N/A — platform closing.

HOW TO GET THE API

N/A — service closing.

MODERATION

N/A (closing).

API FOR POSTING

Deprecated — platform is being permanently shut down.

PUBLISHES A LIVE PAGE?

No — platform goes offline 1 March 2026; users instructed to export content before then.

LINK TYPE

unknown

NEUTRAL NOTE

Oldest Croatian blog platform (launched 2004, Nova TV-owned); permanently closing 1 March 2026. Do NOT use for new publishing — the domain and hosted content are being retired.

Blogg.se <https://www.blogg.se>

API post: Unverified

unknown

PRICING

Free. Paid tiers Unverified.

HOW TO GET THE API

Per the dev portal, a REST API keyed to the authenticated Account; exact auth method (token/OAuth) and signup steps were not retrievable (page unreachable) — Unverified. Check blogg.se/dev/api/ directly.

MODERATION

No pre-publish review; automated spam-filter (assumed).

NEUTRAL NOTE

Swedish platform. A developer REST API is publicly advertised, but the documentation page was not reachable for verification (payment-required error) — confirm access terms, auth, and whether it can actually publish a public post before relying on it.

API FOR POSTING

Advertised — a REST API is documented at blogg.se/dev/api/ (sections for Account and Blog objects). Could not fully verify post-creation support this session (the dev page returned an HTTP 402 error on fetch).

PUBLISHES A LIVE PAGE?

Unverified — likely public if post creation is supported, but not confirmed.

LINK TYPE

unknown

Twoday <https://twoday.net>

API post: Unverified

unknown

PRICING

Free.

HOW TO GET THE API

N/A / Unverified — no documented developer API; new account/blog signup is disabled.

MODERATION

Account-gated — new blog creation long disabled due to limited resources.

NEUTRAL NOTE

Original commercial twoday.net closed May 2018; since Sept 2018 it is run non-profit on the Antville platform with new blog creation deactivated. Not viable for new accounts/automated publishing — verify status before any use.

API FOR POSTING

Unverified / limited — runs on the open-source Antville engine; no clearly documented current posting API, and new blog creation has been deactivated.

PUBLISHES A LIVE PAGE?

Existing blogs remain public, but new blog creation is deactivated, so there is effectively no path to publish a new page.

LINK TYPE

unknown

Tistory <https://www.tistory.com>

API post: Deprecated

unknown

PRICING

Free (Kakao-operated).

HOW TO GET THE API

Historically: register an app, OAuth2 authorize, obtain an access token, POST to the write-post endpoint. Now N/A — API removed.

MODERATION

No pre-publish review; automated spam-filter. Requires a Kakao account.

NEUTRAL NOTE

Tistory Open API terminated by Feb 2024 — do not plan on API publishing. Tistory previously required an invitation code (since removed) and now needs a Kakao account. Manual/dashboard posting only. Outbound link rel not verified.

API FOR POSTING

Deprecated — the Tistory Open API was shut down in stages and fully terminated by February 2024 (file-attach, post, comment and other functions ended sequentially).

PUBLISHES A LIVE PAGE?

N/A via API. Manual dashboard posts are still public/indexable; there is no API path anymore.

LINK TYPE

unknown

Media, portfolio & miscellaneous platforms

16 ENTRIES

Document/portfolio hosts, profile pages, and legacy/edge cases.

Issuu issuu.com DA 93		API post: Yes unknown
PRICING Free tier (limited publications, Issuu branding); paid Premium/Optimum from ~\$19–35/mo	API FOR POSTING Yes — Issuu API v2 (v1 deprecated May 2024)	
HOW TO GET THE API Create a developer account, request an API token in the dashboard, call the v2 endpoints to upload/publish documents	PUBLISHES A LIVE PAGE? Yes — publishes a public document page; indexable, but content is a flip-document not an HTML article	
MODERATION None pre-publish; policy enforcement reactive	LINK TYPE unknown	
NEUTRAL NOTE Best for documents/PDFs, not article-style blog posts. Outbound-link SEO value from embedded docs is weak/unverified. Free tier carries Issuu branding.		
DeviantArt deviantart.com DA 88		API post: Draft-only nofollow
PRICING Free; optional Core membership ~\$3.95–14.95/mo	API FOR POSTING Yes — DeviantArt API (OAuth2), but posting scope is limited and art-focused	
HOW TO GET THE API Register an application in the DeviantArt developer portal, OAuth2 flow; posting/journal endpoints are limited	PUBLISHES A LIVE PAGE? Partial — journals can be public but the API's create/publish scope is restricted	
MODERATION Community + policy moderation	LINK TYPE nofollow	
NEUTRAL NOTE Art community; a business article is off-topic and may be removed. Treat as low-relevance for SEO.		
Behance behance.net DA 92		API post: No nofollow
PRICING Free (Adobe account)	API FOR POSTING Deprecated — public API closed to new registrations since ~2019 (partner-only)	
HOW TO GET THE API N/A for new users — Adobe restricted the API to existing partners	PUBLISHES A LIVE PAGE? Manual only — projects published via the UI are public/indexable	
MODERATION Community + Adobe policy	LINK TYPE nofollow	
NEUTRAL NOTE Portfolio platform; no self-serve publishing API for new users. Content must be portfolio/creative, not promotional articles.		
SlideShare slideshare.net DA 95		API post: No nofollow
PRICING Free; Scribd-linked paid reading tiers	API FOR POSTING Deprecated — public upload API retired (~2018)	
HOW TO GET THE API N/A — no current public write API	PUBLISHES A LIVE PAGE? Manual only — uploaded decks are public/indexable	
MODERATION None pre-publish	LINK TYPE nofollow	
NEUTRAL NOTE Slide decks only, uploaded by hand. Links inside decks pass little/no SEO equity. Owned by Scribd.		

Scribd scribd.com DA 93

API post: No

nofollow

PRICING

Free to upload; reading behind ~\$11.99/mo subscription

HOW TO GET THE API

N/A

MODERATION

None pre-publish; DMCA/policy reactive

NEUTRAL NOTE

Document host, not an article platform; reader paywall limits visibility. Low SEO value.

API FOR POSTING

No public write API

PUBLISHES A LIVE PAGE?

Manual only — uploaded documents are public but often paywalled to readers

LINK TYPE

nofollow

Instructables instructables.com DA 87

API post: No

nofollow

PRICING

Free (Autodesk account)

HOW TO GET THE API

N/A

MODERATION

Editorial/community review

NEUTRAL NOTE

How-to/DIY niche; only genuinely instructional content fits. Not suited to generic business articles.

API FOR POSTING

No public write API

PUBLISHES A LIVE PAGE?

Manual only — how-to guides are public/indexable

LINK TYPE

nofollow

LinkedIn Articles linkedin.com DA 98

API post: Partner-gated

nofollow

PRICING

Free (LinkedIn account)

HOW TO GET THE API

Apply to LinkedIn's Community Management / Marketing Developer Platform (approval 2–4 weeks); scope w_member_social for member posts

MODERATION

Policy + spam enforcement

NEUTRAL NOTE

High authority but automation is heavily gated and Articles specifically are not API-addressable. Manual publishing only in practice.

API FOR POSTING

Partner-gated — long-form Articles are not exposed; the Posts/UGC API requires approved partner access

PUBLISHES A LIVE PAGE?

Articles publish publicly via the UI; API cannot create long-form Articles

LINK TYPE

nofollow

Wattpad wattpad.com DA 92

API post: No

nofollow

PRICING

Free; optional Premium ~\$5.99/mo

HOW TO GET THE API

N/A

MODERATION

Community + policy

NEUTRAL NOTE

Fiction-writing community; business/promotional content is off-topic and low-relevance.

API FOR POSTING

No public write API (internal only)

PUBLISHES A LIVE PAGE?

Manual only — stories are public/indexable

LINK TYPE

nofollow

Populr.me populr.me

API post: Yes

unknown

PRICING

Paid (business one-pager tool); trial then subscription

HOW TO GET THE API

Business account → developer API key → create pages via API

MODERATION

None (self-serve)

NEUTRAL NOTE

One-pagers, not blog articles. Paid platform; SEO link value unverified.

API FOR POSTING

Yes — Populr API (create one-pagers)

PUBLISHES A LIVE PAGE?

Yes — publishes a public one-page microsite

LINK TYPE

unknown

Penzu penzu.com DA 69

API post: No

unknown

PRICING

Free; Pro ~\$19.99/yr

HOW TO GET THE API

N/A

MODERATION

N/A (private)

API FOR POSTING

No public API

PUBLISHES A LIVE PAGE?

No — Penzu is a PRIVATE journaling product; entries are not public

LINK TYPE

unknown

NEUTRAL NOTE

Not usable for backlinks at all — content is private by design. Included only to rule it out.

Quora (Spaces) quora.com DA 93

API post: No

nofollow

PRICING

Free

HOW TO GET THE API

N/A

MODERATION

Aggressive spam/self-promo removal

API FOR POSTING

No public write API

PUBLISHES A LIVE PAGE?

Manual only — answers/Spaces posts are public/indexable

LINK TYPE

nofollow

NEUTRAL NOTE

Links are nofollow and promotional links are actively removed. Useful for reach, not SEO equity.

Reddit reddit.com DA 97

API post: Yes

nofollow

PRICING

Free; API paid/rate-limited for apps

HOW TO GET THE API

Create a Reddit app for OAuth2 credentials; posting subject to per-subreddit rules and spam filters

MODERATION

Heavy per-subreddit moderation + sitewide spam filter

API FOR POSTING

Yes (PRAW/official API) but heavily rate-limited and subreddit-moderated

PUBLISHES A LIVE PAGE?

Yes — posts are public/indexable

LINK TYPE

nofollow

NEUTRAL NOTE

Links are nofollow and self-promotion is aggressively removed/banned. Not a viable backlink automation target; reputational reach only.

Bloglovin' bloglovin.com DA 81

API post: No

unknown

PRICING

Free

HOW TO GET THE API

N/A

MODERATION

N/A

API FOR POSTING

No — not a publishing host

PUBLISHES A LIVE PAGE?

No — Bloglovin' is a blog reader/aggregator, not a place you host content

LINK TYPE

unknown

NEUTRAL NOTE

Frequently listed as a 'web 2.0 site' but you cannot host an article + backlink here. Exclude.

Mix.com mix.com

API post: No

unknown

PRICING

Free

HOW TO GET THE API

N/A

MODERATION

N/A

API FOR POSTING

No publishing API

PUBLISHES A LIVE PAGE?

No — content discovery/curation (StumbleUpon successor), not a host; winding down

LINK TYPE

unknown

NEUTRAL NOTE

Curation platform, not a publishing host. Not a real Web 2.0 target.

Kinja kinja.com

API post: No

unknown

PRICING

n/a

HOW TO GET THE API

N/A

MODERATION

N/A

API FOR POSTING

None — closed to new user blogs

PUBLISHES A LIVE PAGE?

No — G/O Media community platform retired to new users

LINK TYPE

unknown

NEUTRAL NOTE

Appears on legacy listicles but is not open for new blogs. Exclude.

Cohost / Pen.io / Postach.io cohost.org / pen.io / postach.io

API post: No

unknown

PRICING

n/a

HOW TO GET THE API

N/A

MODERATION

N/A

API FOR POSTING

None — platforms defunct

PUBLISHES A LIVE PAGE?

No — Cohost shut down 2024–25; Pen.io permanently closed; Postach.io went offline late 2024

LINK TYPE

unknown

NEUTRAL NOTE

All three recur on old 'web 2.0 lists' but are dead. Listed together to explicitly rule them out.

PART B

Local citation directories

155 sites across four markets · how each is submitted, what it costs, and whether the listing actually appears.

Data aggregators & global API platforms

15 ENTRIES

The wholesale data brokers and the major API-driven listing platforms every market depends on.

Data Axle (Local Listings) data-axle.com

Aggregator-fed

unknown

PRICING

Managed submission ~\$30/location; some legacy direct feeds free
— Unverified for current self-serve pricing

API / AUTOMATION ACCESS

Self-serve form (login required); bulk update for 10+ locations;
phone verification before distribution. No open public write API for
third-party automation

SUBMISSION METHOD

Aggregator — one record fans out downstream

DOES IT ACTUALLY GO LIVE?

Not instant — Data Axle distributes to Bing, Yahoo, TomTom,
MapQuest and nav systems on its own schedule (weeks)

NEUTRAL NOTE

One of the 3 core US aggregators. Value is downstream NAP propagation, not a single dofollow link. Phone verification gates automation.

Foursquare Places foursquare.com DA 92

API

unknown

PRICING

500 API calls/mo free; Premium from ~\$18.75/1k calls (\$0.019/call)

API / AUTOMATION ACCESS

Foursquare Places API — developer account → API key; supports
reads and place data operations

SUBMISSION METHOD

Official API + aggregator (feeds Apple, Uber, Nextdoor, Snap,
Samsung)

DOES IT ACTUALLY GO LIVE?

Data propagates to consumers on Foursquare's schedule; not an
instant public 'listing page'

NEUTRAL NOTE

A location-data product, not a classic listing page. Highest-leverage single integration because of its downstream reach.

TransUnion / Neustar (Localeze) neustarlocaleze.biz DA 63

Manual only

unknown

PRICING

~\$79/yr for 1-24 locations

API / AUTOMATION ACCESS

Paid subscription signup; NO public API — submission is via their
portal

SUBMISSION METHOD

Aggregator — feeds 80+ platforms incl. Bing, Apple, Nextdoor

DOES IT ACTUALLY GO LIVE?

Fans out to downstream partners over weeks; no direct public
listing

NEUTRAL NOTE

Third core US aggregator. Paid, portal-only (no API), so not directly automatable — but high downstream value.

Bing Places for Business bingplaces.com DA 51-93 (source-dependent)

API

nofollow

PRICING

Free

API / AUTOMATION ACCESS

Bing Places API; bulk upload up to 10k locations; single-listing claim
uses phone/email verification

SUBMISSION METHOD

Official API + bulk Excel upload + import from Google

DOES IT ACTUALLY GO LIVE?

Appears on Bing Maps after verification; propagation not instant

NEUTRAL NOTE

Genuinely API-automatable, especially for multi-location. Single new listings still need a verification step.

Apple Business Connect businessconnect.apple.com DA 99

CAPTCHA/verify

unknown

PRICING

Free

API / AUTOMATION ACCESS

Business Connect Locations API + bulk feed, but gated behind
Apple ID + business identity verification

SUBMISSION METHOD

Official API / bulk feed

DOES IT ACTUALLY GO LIVE?

Powers Apple Maps once verified; verification is the bottleneck

NEUTRAL NOTE

API exists but identity verification for net-new listings makes it effectively verification-gated, not one-click.

Facebook Business (Page) facebook.com/business DA 96

CAPTCHA/verify

nofollow

PRICING

Free

API / AUTOMATION ACCESS

Graph API can manage a Page, but Page creation needs a linked personal profile and trips anti-bot/checkpoints

SUBMISSION METHOD

Official API (Graph API) for an existing Page

DOES IT ACTUALLY GO LIVE?

Page is public once created; account checkpoints are the friction

NEUTRAL NOTE

Managing an existing Page via API is fine; creating pages at scale via automation is anti-bot-gated and risky.

Yelp yelp.com DA 93

CAPTCHA/verify

nofollow

PRICING

Free to claim; paid ads optional

API / AUTOMATION ACCESS

No public write/claim API; claim flow uses a phone-call verification code. Bot-fillable form but verification-gated

SUBMISSION METHOD

Claim + phone verification (no create-listing API)

DOES IT ACTUALLY GO LIVE?

Listing goes live after phone verification

NEUTRAL NOTE

Yelp actively discourages automation; links are nofollow. Value is NAP + reviews, not link equity.

OpenStreetMap openstreetmap.org DA 90

API

unknown

PRICING

Free

API / AUTOMATION ACCESS

OSM editing API with OAuth; technically supports adding a POI

SUBMISSION METHOD

Public editing API (OAuth)

DOES IT ACTUALLY GO LIVE?

Edits are live quickly, but community norms strongly discourage bulk/automated business insertion

NEUTRAL NOTE

Technically automatable but community guidelines prohibit spammy bulk POI edits — automating this risks reverts/bans. Use sparingly and manually.

HERE here.com DA 86

Aggregator-fed

unknown

PRICING

Free (Map Creator)

API / AUTOMATION ACCESS

Mainly populated by aggregator feeds; a manual Map Creator form also exists

SUBMISSION METHOD

Aggregator-fed (Data Axle / Neustar) + a HERE Map Creator form

DOES IT ACTUALLY GO LIVE?

Via aggregator propagation or manual map edit review

NEUTRAL NOTE

Best reached indirectly through the aggregators rather than a direct integration.

TomTom tomtom.com DA 81

Aggregator-fed

unknown

PRICING

Free

API / AUTOMATION ACCESS

No meaningful direct free business-submission form; populated by aggregators

SUBMISSION METHOD

Aggregator-fed (Data Axle / Foursquare)

DOES IT ACTUALLY GO LIVE?

Via aggregator propagation

NEUTRAL NOTE

Covered automatically by seeding the aggregators; no separate action needed.

Waze waze.com DA 92

Aggregator-fed

unknown

PRICING

Free

API / AUTOMATION ACCESS

Fed by Data Axle/Foursquare; a separate free Waze Map Editor exists for manual edits

SUBMISSION METHOD

Aggregator-fed + free Waze partner/map editor

DOES IT ACTUALLY GO LIVE?

Via aggregator feed or manual map-editor review

NEUTRAL NOTE

Google-owned. Reached via aggregators; manual editor is community-moderated.

Yahoo Local local.yahoo.com DA 77

Aggregator-fed

unknown

PRICING

Free

API / AUTOMATION ACCESS

Direct submission closed; populated by aggregator feeds

SUBMISSION METHOD

Aggregator-fed (Data Axle / Foursquare)

DOES IT ACTUALLY GO LIVE?

Via aggregator propagation

NEUTRAL NOTE

No direct submission — covered by the aggregators.

MapQuest mapquest.com DA 95 (source-claimed)

Aggregator-fed

unknown

PRICING

Free

API / AUTOMATION ACCESS

No meaningful direct free submission; sourced from aggregators

SUBMISSION METHOD

Aggregator-fed (Foursquare / TomTom / Data Axle)

DOES IT ACTUALLY GO LIVE?

Via aggregator propagation

NEUTRAL NOTE

Covered by aggregators; not a direct target.

Superpages / YP Network (Thryv) superpages.com DA 89 (source-claimed)

Bot-fillable

nofollow

PRICING

Free listing; paid upsells

API / AUTOMATION ACCESS

Free claim form (bot-fillable) plus aggregator feed; DexKnows/YellowBook are downstream of the same network

SUBMISSION METHOD

YP Network (Thryv) — fed via YP/Data Axle; direct claim also exists

DOES IT ACTUALLY GO LIVE?

Live after claim; also populated via YP/Data Axle

NEUTRAL NOTE

One claim covers the Thryv/YP network (Superpages, DexKnows, YellowBook).

Factual factual.com DA 65

Aggregator-fed

unknown

PRICING

n/a

API / AUTOMATION ACCESS

No separate submission — data now lives inside Foursquare

SUBMISSION METHOD

Merged into Foursquare (2020)

DOES IT ACTUALLY GO LIVE?

Via Foursquare

NEUTRAL NOTE

No longer a standalone aggregator; seeding Foursquare covers it.

United States — general directories

PART C

Tooling & API cost reference

Every recurring cost behind the automation — CAPTCHA solving, proxies, Apify, aggregators, managed services, content generation, compute.

All figures below are 2026 list/observed prices from each vendor's own page where reachable. They change often — reconfirm against the live source before quoting a client. Nothing here is a guaranteed rate; it is a planning reference. Conversions: a "\$X per 1,000" rate ÷ 1,000 = per-unit price; 1¢ = \$0.01.

1. CAPTCHA-solving APIs

Needed only for the subset of citation directories that gate their submission/signup form with a CAPTCHA. Billing is prepaid balance (top up, then pay per solve). You bring your own key — these are third-party services, not part of any listing tool.

PROVIDER	RECAPTCHA V2	RECAPTCHA V3	HCAPTCHA	CLOUDFLARE TURNSTILE	IMAGE / NORMAL	GET A KEY
CapMonster Cloud	\$0.60 /1k	\$0.90 /1k	~\$0.60–2 /1k	\$1.30 /1k	\$0.30 /1k	Sign up, top up balance (~\$1 min), use API key
CapSolver	\$0.80 /1k	\$1.00 /1k	~\$1–2 /1k	\$1.20 /1k (Ent. \$3)	\$0.40 /1k	Dashboard → top up → API key
Anti-Captcha	\$0.95–2 /1k	\$1–2 /1k	~\$2 /1k	\$2 /1k	from \$0.50 /1k	Register → deposit → API key
2Captcha	\$1–2.99 /1k	\$1.45–2.99 /1k	~\$2–3 /1k	\$1.45 /1k	\$0.50–1 /1k	Register → deposit → API key

Per-solve range: \$0.0003 – \$0.003 (0.03¢ – 0.3¢). Cheapest reliable AI solve (CapMonster reCAPTCHA v2) ≈ \$0.0006. All well below any per-unit ceiling. Note: pricing assumes the solver works on that CAPTCHA type — success rates vary and are not guaranteed.

2. Proxies (residential / mobile / datacentre)

Used to distribute automated submissions across IPs so a market's directories don't see one machine hammering every form. Not always required (many long-tail forms have no IP-based blocking), but budget for it at scale.

TIER	EXAMPLE VENDORS	PRICE
Budget residential	DataImpulse (~\$1/GB), IPRoyal (~\$1.75/GB), Webshare	\$1 – \$1.75 /GB
Mid-market residential	Decodo/Smartproxy (~\$3–8.5/GB), SOAX, NetNut, NodeMaven (~\$7/GB)	\$3 – \$8.5 /GB
Enterprise residential	Oxylabs (\$8 PAYG, \$12 list), Bright Data (\$4 PAYG, \$15 list)	\$8 – \$15 /GB
Mobile	DataImpulse mobile (~\$2/GB) and others	\$2 – \$4+ /GB
Datacentre	Various	cheapest, but easiest to detect/block

A single citation submit with images/CSS blocked uses ~1–5 MB. At \$3/GB that is **\$0.003–\$0.015**; realistic blended (many submits need no residential IP) ≈ **\$0.002–\$0.005 per submit**.

3. Apify (Citation Builder actor + platform)

Convenient but the most expensive per-citation route. Pay-per-event on top of a normal Apify account.

EVENT	PRICE
Citation audited	\$0.05
Citation submitted (free directory)	\$0.25
Aggregator API push	\$0.50
Apify compute (reference)	1 CU = 1 GB-hr; \$0.13–\$0.30/CU by plan

CAPTCHA solving on Apify is **bring-your-own-key** (your own CapSolver/2Captcha). Actor is callable via Apify's REST API (run endpoint + webhook/poll). At **\$0.25 per submitted citation** it sits well above a 10¢ target — useful as an occasional fallback, not a primary engine.

4. Data aggregator subscriptions

Not priced "per citation" — each pushes one record to hundreds of downstream directories.

AGGREGATOR	MODEL	2026 PRICE	ACCESS
TransUnion / Neustar (Localeze)	Annual subscription	~\$79/yr (1–24 locations)	Paid signup; no public API
Data Axle (Local Listings)	Managed / subscription	~\$30/location via managed; some legacy free feeds	Account + phone verification before distribution
Foursquare Places	Pay-per-API-call	Premium from ~\$18.75/1k calls (\$0.019/call); 500 free/mo	Developer account → API key

Per raw unit these look expensive, but each fans out downstream, so the *effective* per-propagated-citation cost is small. Foursquare is a data product (per-call), not a per-location listing.

5. Managed citation services (for comparison — all above a 10¢ unit)

SERVICE	PRICE PER CITATION / LOCATION	NOTES
BrightLocal Citation Builder	\$2.00 (bulk credits) – \$3.20 (card) per listing; \$30 per aggregator submission	Build-once, kept forever
Whitespark	~\$4 / citation (packages \$20–\$999)	Human-built
Loganix	\$3 – \$5 / citation	Done-for-you
Yext	\$1,000 – \$3,000 / location / yr	Rental — listings revert if you cancel
Moz Local	\$192 – \$480 / location / yr	Network sync

6. Web 2.0 paid tiers (what actually costs money)

Most publishing APIs are free to call; the cost is optional platform upgrades, not the API itself.

PLATFORM	FREE API POSTING?	PAID TIER (IF ANY)
WordPress.com	Yes (REST API, OAuth2)	Personal \$4/mo+ removes ads / adds domain
Blogger	Yes (API v3, free)	None
Tumblr	Yes (API v2, free)	Cosmetic only (~\$5/mo)
Ghost(Pro)	Admin API needs Publisher tier	\$29/mo+ (Starter has no custom integrations) or self-host
Hashnode	Publish API now Pro-gated	~\$5/seat/mo
Medium	Deprecated (closed to new integrations)	—
Substack	No official write API	10% of paid revenue
dev.to / Write.as / Telegra.ph / LiveJournal	Yes, free	mostly free

7. LLM content generation (per Web 2.0 article)

Each Web 2.0 post needs a genuinely distinct article (templated/duplicate content is the pattern Google penalises). Rough generation cost with a current model for an ~800–1,200 word post: **~\$0.001 – \$0.03 per article** depending on model and length. Human editorial review time is the real cost, not the tokens.

8. Server / compute

A small VPS to run the Playwright bot: **~\$5–6/mo** (~ \$0.008/hr). A citation submit occupies the browser ~60–90s → **\$0.0002–\$0.002 of compute per submit**.

Per-unit cost stack (what one unit actually costs us)

UNIT / METHOD	ITEMISED	ALL-IN	VS 10¢
Web 2.0 backlink — official API (WordPress.com/Blogger)	API free + compute + optional LLM body	\$0.0002 – \$0.03	Under (deep)
Citation — self-hosted Playwright, marginal	CAPTCHA ~\$0.0006 (when needed) + proxy ~\$0.002–0.005 + compute ~\$0.001	\$0.004 – \$0.008	Under (deep)
Citation — official-API write (Bing/Foursquare)	one API call	\$0.005 – \$0.019	Under
Citation — self-hosted, fully loaded	marginal + one-time build ÷ volume	~\$0.05 at ≥50–100k units	Under (volume-dependent)
Citation — Apify actor (per submit)	\$0.25 + BYOK CAPTCHA	~\$0.251	Over ~2.5×
Citation — managed service	vendor price	\$2 – \$5	Over 20–50×

Reading it: the only routes that stay under a 10¢ unit are self-hosted automation and official-API writes for citations, and free official APIs for Web 2.0. CAPTCHA and proxy costs never threaten the ceiling on their own. Off-the-shelf tools and managed services are the routes that break it. All figures are directional planning numbers, not quoted rates.

A note on promises

This reference is intentionally conservative. Where a platform's behaviour, price, or link policy could not be confirmed, it is marked **Unverified** rather than assumed favourable. Automated posting and listing submission depend on third-party systems that change their APIs, pricing, CAPTCHA, and moderation without notice, and several explicitly restrict automation in their terms. Treat every "Yes" as "yes at time of writing, subject to the platform's current rules" — and confirm against the live source before quoting a specific outcome to a client.
